

*Superior quality, precision and reliability are reflected
in every A&M product and service*

- ITT Night Vision**
- Certified Supplier
 - Excellence in Total Quality Assurance

- Amp Incorporated**
- Supplier Excellence
 - Exceptional Performance
 - 100% Quality and Delivery

- Electrolux**
- Preferred Vendor Status
 - Supplier Quality Award

Injection Molding • Product Assembly

Enabling Technology through Quality

design

A&M provides complete design and engineering services to take your product from inception, to prototype, to mass production — *on site*. By designing and manufacturing your product on site, A&M maintains superior quality control and responds quickly to your production goals.

tooling and mold making

A&M provides the highest level of quality control possible by manufacturing our own molds — *on site*. By designing and manufacturing your molds on site, A&M molds can be produced with sophisticated geometry, high precision tolerances and multi-contoured surfaces.

robotic injection molding

A&M provides superior injection molding quality by use of high speed robots for the injection molding process. Our robots are capable of maintaining exact tolerances during the execution of hundreds of thousands of production cycles. Our robots can work unattended for 24 hours a day, thereby allowing A&M to boost production on demand.

Applications

military

- Night Vision devices
- Lifesaving products
- Harsh environment
- High strength/size ratio
- Prototype development

medical

- Medical products
- Bioscience products
- Healthcare research
- Prototype development
- Laboratory products

consumer

- Electrical products
- Retail products
- Electronics
- Communications
- Hearing protection

A&M uses the latest CAD/CAM software, CNC and robotic injection molding equipment. We can meet any need from single services, to turnkey inception, to production projects. We welcome you to contact us to discuss your product needs.
