Section 1: Deployment for mutli-target installations
- Best practices for medium to large installations
- Selecting the appropriate hardware
- Local/remote data logging
- Utilizing the map to reduce network traffic across platforms
- Navigation between AspectFT targets

Section 2: Configuring Studio
- Limitations of the JVM
- Large projects and batch file settings
  - –Xms, -Xmx, -Xss

Section 3: Configuring Projects
- Additional map functionality
  - Home App
  - Master Value
  - Display Classes and Reference names

Section 4: Working in MySQL
- Configuring MySQL without a DNS Server
- Database Backups
- Database privileges
- Creating databases
- Testing SQL statements outside of AspectFT-Studio

Section 5: Custom Alarming/Trending
- Creating custom alarming
- Creating custom trending
- Dynamic Table View element
- Trend Summarization

SMART BUILDING SOLUTIONS®

Section 6: Advanced Elements
- Database Elements
  - Creating SQL queries for various lookups for data presentation
- Working with Xpath
- Cron Server
  - Custom reporting

Section 7: Troubleshooting
- Verifying the Java PID
- Project Performance
- AspectFT Control Engine log
  - Understanding errors
