- Wireless IR headphone transmitter
- Wireless FM transmitter
- Led Dome lights
- IR Remote control

Device is optimized for the
iPhone 5 and later.

Wirelessly Stream !
1080 HD Content from your smartphone

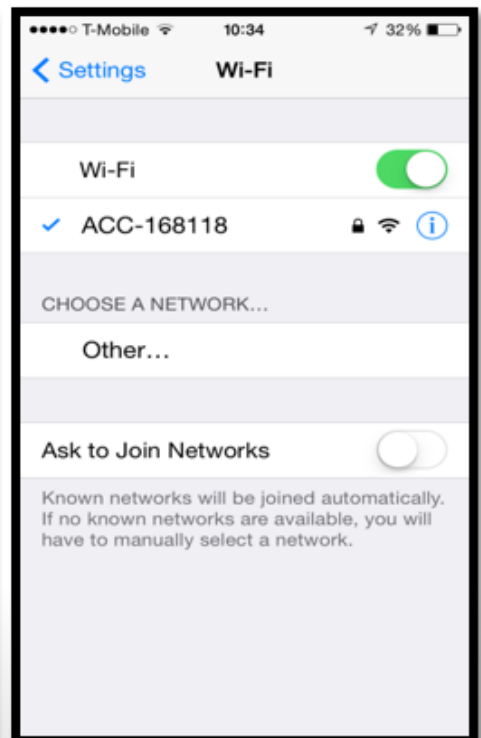

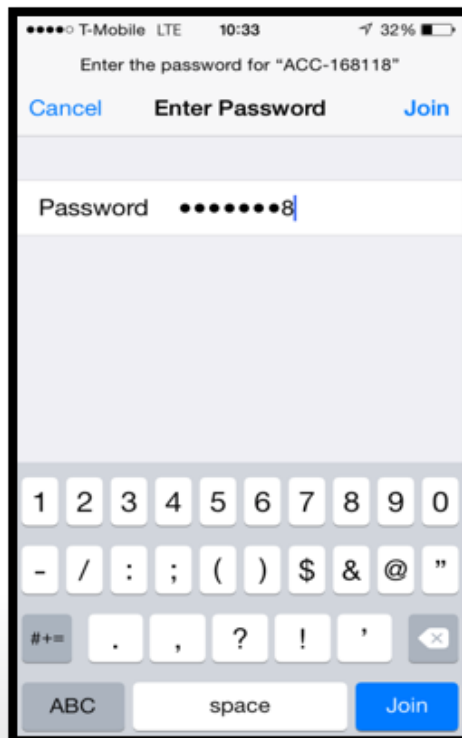

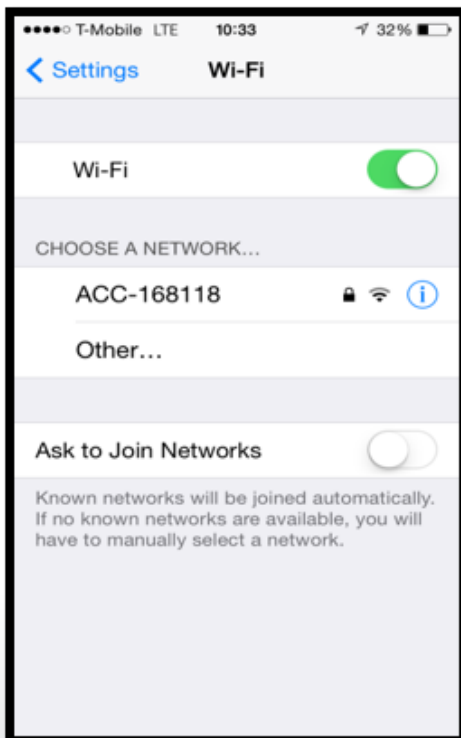

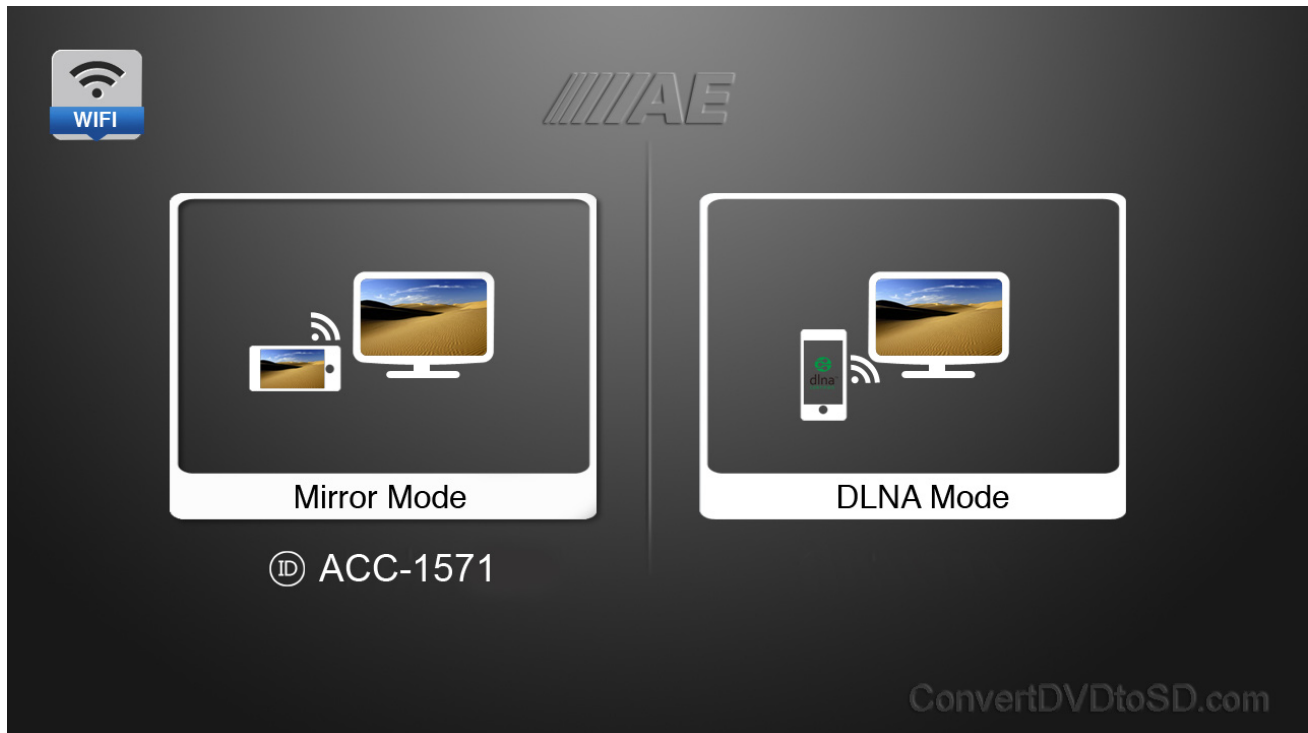

Streaming Information

To view your mirroring mode you must turn to the channel with HDMI or HDMI Video.

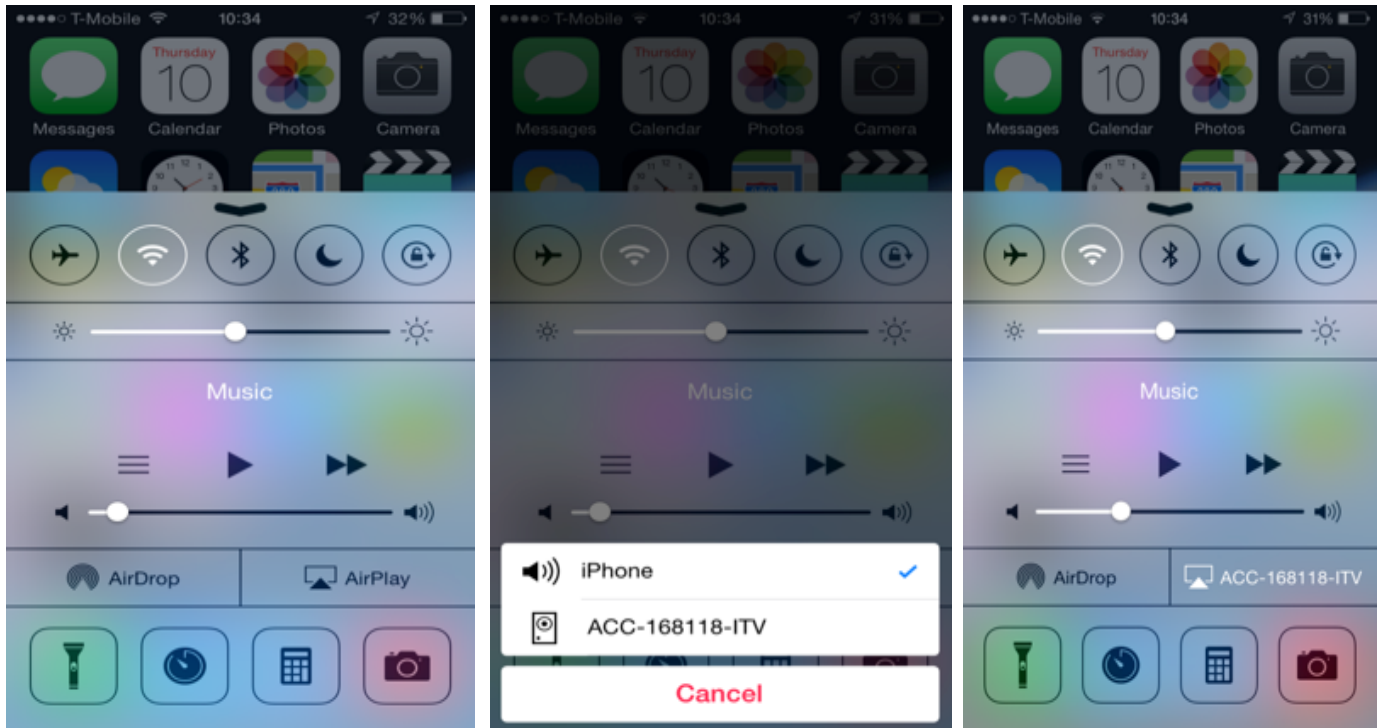

There are two different ways to send media wirelessly. The first is Miracast or screen mirroring, which allows the user to send whatever is on the screen of a device to the screen of the flip down monitor. Mirroring compatible with phones, tablets, or pc This technology is compatible of streaming live information and media from Netflix, YouTube, Hulu, and etc. (NOT on Apple products) Then there is DLNA which stands for Digital Living Network Alliance. (Both iPhones [AirPlay] and Android can use DLNA) This media sharing technology allows the user to stream any media that is on a device's hard drive or storage. For instance, if there are movies saved on the device's storage then DLNA can be used. On the other hand Miracast will show whatever is on the screen on the device including any phone calls, navigation, texts, emails, and etc. This device has a Automatic switching mode form Mirroring to DLNA. You are not able to chose what mode you want to be on it is always default on mirroring mode.

Next you will go to your iPhone, turn on your Wifi, and log onto the wireless ID that looks something like ACC-1571

Next slide up from the bottom of the screen towards the top (to access the control center) from your iPhone and select Airplay. Once you select Airplay a screen will come up with of choice of either iPhone or the ID of the device you are streaming to for example, ACC-1571. Select the device ID.

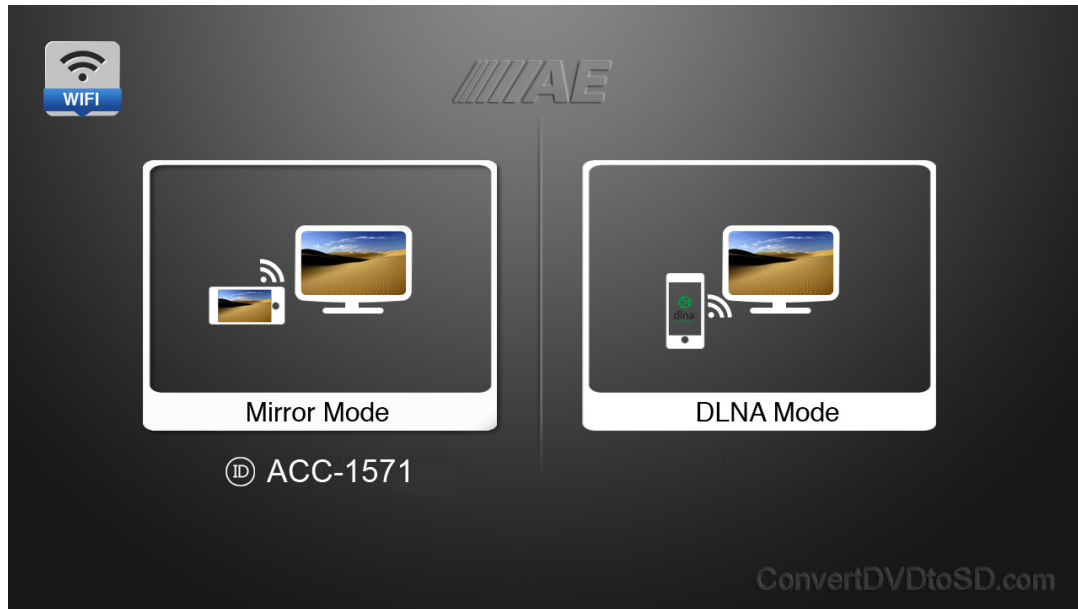

You will see in the control center AirDrop and the device ID:

**** NOTE ****

**APPLE WILL NOT SUPPORT ANY LIVE STREAM MEDIA
SUCH AS NETFLIX, HULU, YOUTUBE,
ICLOUD OR ANY OTHER LIVE STREAM MEDIA**

**APPLE VIDEO AND PICTURES MUST BE
DOWNLOADED TO THE DEVICE HARDDRIVE / MEMORY**

On andriod devices you only have to locate where your mirroing option and then connect to it by looking for the same name on your monitor. These are a few different ways were you can see and select mirroring from. once connected your android device will mirror to your screen and you can begin to enjoy it!
