

# Extra comfort for your family

Now your family can have all of the features offered by today's most advanced, high-end central heating and air-conditioning systems at a very affordable price. With *Comfort+* you will dramatically improve the performance of your current system and save money at the same time!

*Comfort+* is designed with your comfort and pocket book in mind. It offers three separate, fully adjustable operating speeds for your current system. This allows your contractor to customize the optimal blower speeds for your system's exact heating, cooling and air circulation modes of operation.

## Upgrade Your Current System with *Comfort+*

Its compact design makes *Comfort+* an ideal addition to your current H/A/C system. And it saves you the cost of a full system replacement!

## The Greater Comforts of *Comfort+* Include...

### **Better Climate Control**

The comfort of your home depends on the air temperature, humidity and amount of air circulation throughout your home all year long. Every home's central heating and cooling system presents a unique set of operating parameters – duct sizing, location within your floor plan, and the layout of your H/A/C system. Most of today's central systems offer only one or two fixed blower speed settings, but *Comfort+* offers an infinite range of blower speed control so your installing or servicing contractor can independently fine tune your system's heating and cooling performance.

### **Constant Conditioning Control**

In order for your current system to reduce or eliminate the uneven temperatures throughout your home, the system's blower must run almost continuously, costing you precious electrical energy dollars! Most systems limit you to one speed for your heating and/or cooling cycles. With *Comfort+*, your contractor can select the ideal cooling or heating mode speed for your system as well as a slow idle speed that will continuously destratify the air inside your home without drafts; actually saving you money! And if your system is equipped with humidity control or electronic air cleaning, *Comfort+*'s *Destrat Mode* continuously conditions your home's air.

### **Quiet Control**

When most central heating and cooling systems "kick-on" you feel and hear the blast of air pouring out of the ducts into your home. In addition, you may also hear "whistling outlets" or "buckling duct work", disturbing an otherwise restful night's sleep. In the past, you had to simply tolerate this inconvenience – there was no other choice. But with *Comfort+*'s *Soft-Start* mode, you'll never hear your system "kick-on or off" again! *Soft-Start* automatically and slowly ramps up and down the speed of your system's blower, totally eliminating nuisance noise of any kind!

### **Cost Control**

There are several operating inefficiencies inherent to most central systems that waste your heating & cooling dollars. Your original system simply doesn't allow for efficient "fine-tuning" by your heating & cooling contractor. *Comfort+* is designed to optimize the performance and energy efficiency of your current system, saving you hundreds of watts every day of its operation.

Quiet comfort is just a twist away!  
Your service person can achieve infinite control with the *Comfort+* *Destrat Mode*.

## Quick, quiet, sensible and affordable *Comfort+*<sup>TM</sup>

- + *Fast installation by your contractor*
- + *Fits virtually all central heating & cooling systems – gas or electric*
- + *Start saving on energy and utility costs immediately*
- + *Meets UL-508C*
