BASE Engineering Inc. Appoints EGSA as Master Mexican Distributor

May 28, 2015 - Saint John, Canada: *BASE Engineering Inc.* - the world leader in radio remote control technology for the LPG and Refined Fuel transport industries - has signed a master distribution agreement with *EGSA Mexico*, an LPG equipment distribution company based in Celaya, Mexico.

EGSA's Luis A. Cervantes, CEO, and Miguel González, BDM, are the main architects around the exclusive agreement. *EGSA* sales and technical staff underwent thorough *BASE* product training throughout the winter and they are now stocking product, ready to sell.

"After visiting with *EGSA* at the World LP Gas Forum in Miami last September, it was very evident that *EGSA* is the leading supplier of LPG products for Mexico and Central America", said John O'Connell, Director of Business Development for *BASE*.

EGSA will focus their distribution efforts on *BASE's* customizable Radio Control handhelds and Emergency Stop shut-down products for the transport and bulk terminal industries. These products increase job safety and productivity, and are built to DOT specs with ATEX/IECEx certification for use in hazardous environments.

"We've been selling internationally for many years, and our strategic approach is to continue to grow this business using Master Distributors across the globe. *EGSA Mexico* is a very important step in that direction", said *BASE* President Steve Belyea. "Although we've done business with *EGSA* before, our recent visits have confirmed that *EGSA* is a dedicated distributor and have great market knowledge to share based around both safety and support".
