

Kycon Adds New SuperSpeed USB 3.0 Connectors to Line Up

San Jose, CA – Kycon is expanding their already extensive USB product line by adding USB 3.0, the next generation design-in Universal Serial Bus – KUSBX-xx1N9 Series. The USB 3.0 connectors, also known as SuperSpeed USB, support data transfer rates

of up to 10 times faster than the USB 2.0 version and are backward compatible with existing USB devices. The new USB 3.0 products will enhance any device that is optimized at higher speed data transfer such as high-resolution webcams, video surveillance cameras, digital video cameras, and external media such as Blu-Ray drives.

The KUSBX-xx1N9 Series meets the USB Implementers Forum's SuperSpeed USB Specification that allows not only product interoperability with existing USB 2.0 products, but also allows users full duplex arrangement data flow. The series offers a Type-A and Type-B receptacle. Both through-hole shield receptacles feature the distinctive USB 3.0 blue insulator. Additional USB 3.0 products will be released later this year.

Key Specifications:

- Full duplex configuration
- Backward and forward compatible with existing USB 2.0 devices
- Complies with USB-IF 3.0 Specification

In 2009, Kycon, Inc. was named the **#1** connector company in overall product quality, delivery reliability, sales support, customer service function, and website usability, by Bishop and Associates, a connector industry consulting firm.
