

Our focus is innovating security
where you need it most

React faster and make accurate decisions -
with intrusion-alarm/IP video integration

BOSCH

Invented for life

Live IP video of the scene

The moment intrusion is detected

As a loss prevention professional, you have two main weapons in your fight against theft: your intrusion alarm system and your IP video surveillance system. Now, imagine how much easier life could be if these two systems were integrated. Imagine how things would improve if these could 'talk' to each other. For example, the moment an intrusion alarm was raised, it would appear on your video management system – so you could immediately see what's going on, search the vicinity and take appropriate action. Our new BVMS / intrusion alarm system integration makes this possible, and more.

Making daily duties easier

Your loss prevention staff will become more efficient with only one control interface to operate, instead of two separate systems. They will have a single graphical user interface to control the

arm/disarm status of all your intrusion alarm areas, with no need to connect to each panel individually using alarm software.

How it all comes together

Easy integration with no additional hardware

When remodeling a store with a new IP video system or equipping a new store, the Bosch intrusion B Series panels, or the new G Series panels can be easily integrated into the Bosch Video Management System (BVMS) or DIVAR IP recording appliance with no additional hardware or cabling. Integration is accomplished completely via their existing IP interfaces. Now you have all the benefits of your intrusion alarm system integrated in your IP video system, without buying and installing additional hardware or wiring.

More power

All BVMS event handling features can be applied to Intrusion alarms. For example, you can automatically see relevant video in response to intrusion alarms, display alarm action plans, and send alerts via email or text messages. This maximizes the efficiency and effectiveness of your loss prevention staff.

One interface for all

BVMS now provides an integrated interface for your video and intrusion alarm systems. Directly in the intuitive graphical user interface, your loss prevention staff can monitor and control the current arm status of each intrusion area. And this works with up to 32 alarm panels, easily scaling to systems of any size.

Easy configuration

Each panel's available alarm areas and input points are automatically detected by the built-in 'Autodiscover' feature. Intrusion alarms map seamlessly into the BVMS, saving time and costs.

The powerful BVMS graphical user interface greatly simplifies management of the intrusion alarm system, making loss prevention operators more effective and efficient.

Which products can I use?

To ensure you get all the benefits of IP video surveillance and intrusion alarm system integration – but without the addition of any hardware and cabling costs - simply specify the BVMS software or the all-in-one DIVAR IP 3000/7000 Recording Appliance with the Intrusion Integration license and any of the GV4 (v2 firmware) panels, B Series panels, or the new G Series panels (B9512G, B8512G).

Bosch Video Management System

- ▶ Maximum reliability while lowering costs
- ▶ Most efficient management and alarm handling

DIVAR IP 3000
All-in-one, fully featured video management solution for up to 32 channels

DIVAR IP 7000
RAID-5 protected, all-in-one, fully featured video management solution for up to 128 channels

B Series or new G Series control panels

Security all round

In addition to our video surveillance systems, we offer a full line of security products and accessories, as well as a variety of tools to help you specify and design the optimum system for your operation. You can rely on our renowned quality and reliability, backed by our three-year warranty, and our world-class training and technical support. Also, compatibility with third-party products is assured, thanks to ONVIF¹ and our Integration Partner Program.

For additional information, please refer to our website or contact one of our sales representatives.

A tradition of quality and innovation

For over 125 years, the Bosch name has stood for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.

Bosch Security Systems proudly offers a wide range of security, safety, communications and sound solutions that are relied upon every day in applications around the world, from government facilities and public venues to businesses, schools and homes.

¹ ONVIF (Open Network Video Information Forum) ensures interoperability between different products, regardless of manufacturer.
