

Our focus is innovating security
where you need it most

Link transaction data with video recording and
search ultra-fast for incidents.

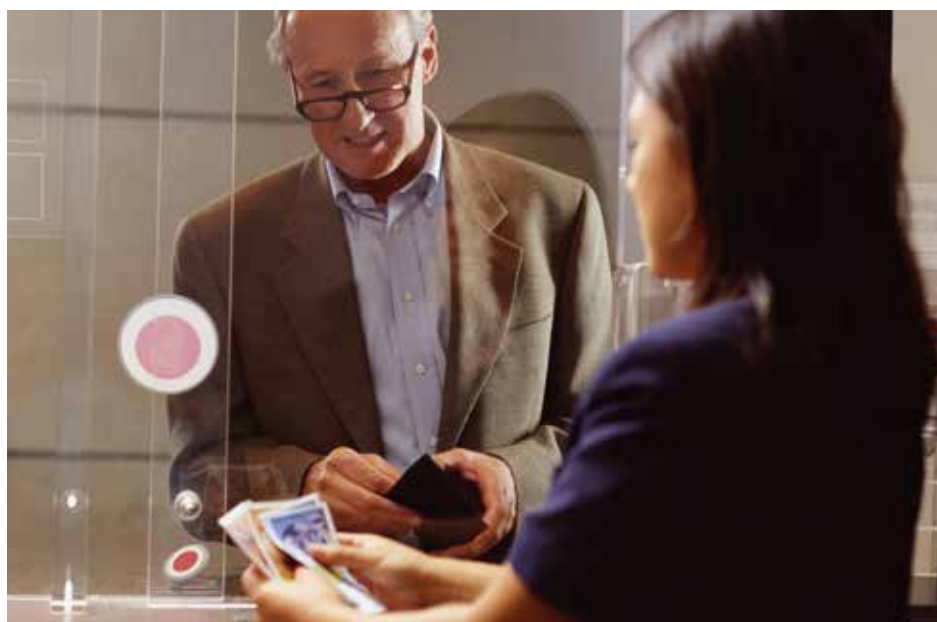

BOSCH

Invented for life

All you need is some transaction data

For instant retrieval of the relevant video clip

As a loss prevention professional manager your loss prevention staff need to frequently search for IP video clips of financial transactions at ATMs and/or at POS systems in stores. And this is often time-consuming and laborious. Imagine how much faster video searching could be if you could search using the ATM/POS transaction data. Fortunately, now you can, with Bosch Video Management System (BVMS) or the Bosch DIVAR IP 3000 and 7000 all-in-one recording, viewing and management solution with ATM/POS integration.

By integrating video and financial transaction data you can instantly access and view the relevant video clip to investigate possible illegal activities by customers or personnel. You can search for any transaction text, such as time of day, card number, or item code. Simply enter this into the system and the software will display a list of all matching results. Click on any of these “hits” to view the associated video. The transaction text is displayed simultaneously with the video in a separate pane, either directly below the video or to the side, as the user prefers.

Transaction text data can be displayed with any or all of the playback video windows simultaneously, making it fast and easy to find the relevant incident.

How your loss prevention staff searches ultra-fast

- ▶ Easy text search with wildcard support
- ▶ Scrolling transaction text data in separate panes, synchronized with the associated video
- ▶ Multiple text panes displayed simultaneously
- ▶ User-selectable option to display text beside or underneath the video windows

How it all comes together

The text data collected by the ATM or POS system is time-stamped and transmitted to the video recorder unit for recording alongside one or more video camera recordings. This is done using the existing network connections and requires no special cabling.

Which products do I need?

All you need is a video system with Bosch Video Management System (BVMS) software with an ATM/POS License, or a DIVAR IP 7000 all-in-one recording solution with integrated BVMS, which comes with ATM/POS license pre-installed.

Security all round

In addition to video surveillance systems, we offer a full line of security products and accessories, as well as a

variety of tools to help you specify and design the optimum system for your operation. You can rely on our renowned quality and reliability, backed by our three-year warranty, and our world-class training and technical support. Also, compatibility with third-party products is assured, thanks to ONVIF¹ and our Integration Partner Program.

For additional information, please refer to our website or contact one of our sales representatives.

¹ ONVIF (Open Network Video Information Forum) ensures interoperability between different products, regardless of manufacturer.
