to see a salesman, I've got
a battle to fight.

AlphaGo VS Human Master

BUSINESS INSIDER

DeepMind secretly unleashed its Go-playing AI online, and it beat some of the world's best players 50-0

DAVE SHREVE
JAN. 6, 2017, 10:45 AM

The creator of a mysterious artificial intelligence (AI) that has beaten some of the world's best human players at the Chinese board game Go over the last few days has been revealed as Google DeepMind.

Dennis Hassel, the cofounder and CEO of Google DeepMind, tweeted a screenshot of a DeepMind update that stated: "We've been hard at work improving AlphaGo, and over the past few days we've played some unofficial online games at that time controls with our new prototype version, to check that it's working as well as we hoped."

"We thank everyone who played our accounts Magister (7) and Master (7) on the Tigris and Frits servers."

Hassel's announcement came within hours of a

Making Things Think

Dedicated Hardware + Heterogeneous Computing

It's Actually Not Moore's Law We Need to Worry About

Given the breakdown in Dennard scaling and power limitations associated with "Dark Silicon", it has increasingly become more difficult to drive incremental preprocessor performance improvements.

Moore's law continues to hold, but that's not the issue

Frequency scaling has plateaued for quite some time

Core scaling is expected to begin to plateau over the next several years given the "Dark Silicon" phenomena
