

New Product Press Release - for immediate release

New 19"x1U Rack Mounted Dual Input DC Power Supply from System Connections (Cambridge)

Provides managed DC supply solutions in Broadcast and Telecommunication networking applications

- Two discrete 240Vac power supplies in a single 19" 1U rack
- 2 x 4 output ports of 12V dc (with 5V dc or 3V dc option)
- Each port protected with 2.5A auto-resetting fuse
- Short circuit protection on inputs
- Input power supplies can be swapped in situ
- Power-on indicator on front panel
- Custom labelling to front panel available

Packaged in a 19" x 1U unit, this power supply is designed to deliver managed DC outputs in such applications as Broadcast and Telecommunication networks. The dual implementation provides 2 x 240AC inputs and 2x4 outputs of 12V dc (5V dc and 12V dc output options are also available). Protection is provided by 2.5A auto-resetting fuses on each port with short circuit protection on the

inputs. Power on indicators are situated on the front panel which can be customised for OEMs. The modular construction allows outputs to remain connected even when the input power sources are removed. Optional 2, 3 or 5 metre 240 V input cables with UK Schuko straight or right angle plugs can be provided. Alternatively, System Connections can supply custom output patch leads to customer specification.

The power supplies carry CE, UL, FCC and CSA approvals.
