New Product Press Release - IBC 2016

**Surface Mount 12G-SDI BNC Connectors now available from Cambridge Electronic Industries.**

*Designed for 4K UHD broadcast applications these BNC and Micro BNC connectors now offer the benefit of Surface Mount production methods.*

The use of Surface Mount technology not only offers significant savings in production costs but also allows higher component board density. This new range of 12G-SDI surface mount coaxial connectors has been introduced by Cambridge Electronic Industries to meet the benefits of this technology. Designed to be compatible with reflow oven assembly technology it allows all components to be soldered to the PCB in one process.

Meeting SMPTE 12G-SDI 4K standards the BNC and Micro BNC versions are available in Right angle, Bulkhead and Straight mounting styles.

At IBC our engineers will be available to discuss this range and also customised variants to meet special applications.
