CableEye System Self Test Procedure

1. Remove any CB boards or test cables from the CableEye system. Be sure that nothing is connected to the test points headers.
2. If you have expansion modules attached to the main unit, be sure to have the switch in the 128 TP position.
3. Connect the tester to the PC and turn the CableEye software on.
4. Click on the File menu and select "Self Test" from the list.
5. Click on Run Once and wait for the results.

If you get an error message, the best thing to do is to take a screenshot and send it to CAMI Research. We will analyze the data and confirm if the tester need to be sent back for repair.
