

Ensure Against Connector Damage With
The Connector Protector™
 from CAMI Research

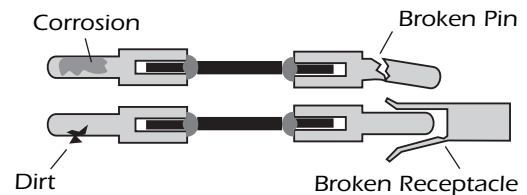

- **Isolate Soldered-In Connectors from Mechanical Wear-Out**
- **Protect Pins on Expensive Custom Cables from Breakage, Corrosion, and Contamination**
- **Guard D-Sub Shells from Bending**
- **Protect Connectors on Your Laptop PCs**

Safeguard Your Computers and Peripherals from Connector Damage

Board-mounted D-subminiature connectors that are subject to frequent insertion and removal of cables may be protected from mechanical wear-out using the Connector Protector™ from CAMI Research. The size of a mini gender-changer, the Connector Protector firmly attaches to D-sub connectors using jackscrews. When cables are connected or disconnected, the inexpensive Connector Protector takes the mechanical wear, and may be quickly and easily replaced when continuity becomes intermittent or damage is sustained. Available for most standard D-sub sizes. Other sizes available on special order.

Major Causes of Connector Failure

Female D-subminiature connectors are especially prone to rapid wear-out and, in some cases, become intermittent after only 10 insertion cycles. The Connector Protector guards laptop PCs or other portable equipment from the high cost of replacing worn-out board-mounted connectors, and also finds applications in high-reliability, low down-time applications. The jackscrews may be easily reversed to allow mounting to either female or male connectors.

Connector Protector

Item	Type	Price Each		
		1-24	25-99	100+
901	DB9	4.45	4.01	3.78
902	DB25	5.65	5.09	4.80
903	DB15	5.15	4.64	4.38
904	DB15HD	6.15	5.54	5.23
905	DB37	7.85	7.07	6.67
906	DB50	8.95	8.06	7.61
907	DB26HD	6.45	5.81	5.48
908	DB44HD	7.93	7.14	6.74
909	DB62HD	10.91	9.82	9.27
910	DB78HD	11.50	10.35	9.78
