

FOR IMMEDIATE RELEASE:

**Compact 240 Watt
Power Supply
With 150% Peak Load Output**

May 15, 2012 - Carlo Gavazzi is proud to announce the launch of a new and powerful switch-mode power supply in a compact housing. The **SPD240C Series** features a **150% peak load** capability for a full 3 seconds and, at an installed width of only 64mm, this new series **saves approximately 25% DIN-rail width** compared with our standard 240 watt power supply. This enhanced 240 watt series also includes **Active Power Factor Correction** which improves the power factor to 0.97 @ 230VAC resulting in increasing the output power capability. Therefore, the **SPD240C Series** offers more power, using less panel space, thus making it an ideal choice for DC loads.

Additional standard features included with the **SPD240C Series** power supplies are parallel function, universal AC input, enhanced CE certifications, a power "ready" relay output and short circuit protection. Technical features include:

- 150% peak load capability
- Universal AC input 88-264VAC
- Active power factor correction
- Parallel connection
- Compact dimensions
- Power ready relay output
- LED for DC power "low"
- High efficiency to 83%

The compact **SPD240C Series** power supplies are UL and cUL listed, and TUV and CE approved, your assurance of high quality and safety. They are available from Carlo Gavazzi's network of sales offices, distributors or www.GavazziOnline.com.
