NEW COBRA COIL™ SPRING TENSIONS BANDSAW BLADE FOR GREATER ACCURACY

Grand Rapids MI • Improper bandsaw blade tension decreases cutting precision and shortens blade life.

The new Cobra Coil™ replacement tension spring from Carter Products allows you to increase blade tension by 200% to 300%, depending on blade size and application. You will cut faster, more accurately, reduce saw maintenance requirements, and replace your blades less frequently.

The Cobra Coil™ is manufactured to ASTM specifications from chromium vanadium steel that has been heat-treated and tempered. Its unique coil design improves overall strength and assures you of exceptional durability, even under the most demanding circumstances.

Available for saws from 10" to 20" in diameter, Cobra Coil™ springs are one of the most cost-effective upgrades you can make to your saw and are quick and easy to install.

Carter Products has been a leading supplier of productivity-enhancing products since 1929. Their line of band saw accessories is the broadest in the industry, including guides and tires for nearly every model of bandsaw on the market, past and present. Carter also offers a full range of guide line, laser positioning and inspection lighting, the innovative Carter Flip-Pod® vacuum part holddown system for CNC manufacturing, precision calibration instruments for widebelt sanding applications, and many other products.
