NEWLY UPDATED CARTER WIDEBELT SANDER SET-UP & DIAGNOSTIC DEVICE NOW EVEN MORE COST EFFECTIVE.

Grand Rapids MI • Taking advantage of improved engineering and lower cost of manufacturing, Carter Products is pleased to announce a 40% reduction in the cost of their Widebelt Sander Set-up & Diagnostic Device. For a limited time this quality-engineered device is available for \$695.00.

The Carter Widebelt Sander Set-up & Diagnostic Device is designed to reduce abrasives expenses and improve product quality in any plant using a widebelt sander.

Research has shown that over 90% of the widebelt sanders in production facilities today are improperly calibrated and utilized. This results in shortened belt life, poor product quality, and increased expenses. Improper calibration will eventually damage the sander itself, requiring replacement.

The Widebelt Sander Set-up & Diagnostic Device allows the operator to measure the platen height across the entire work surface and adjust settings for greatest efficiency and highest-quality output.

The unit has a 5 1/4" overall height and is equipped with a heavy-duty base for solid, stable support. The three-section detachable handle provides the flexibility to measure accurately inside the largest sanders. The spring-loaded plunger is attached to an electronic sensor that provides an instantaneous, precise digital readout. The digital readout switches easily from inch to millimeter increments and can be set to zero before each measurement for simple comparisons across the working surface.

This model features a separate measuring unit with electronically linked, battery powered LCD remote readout head. The new lower price also includes a booklet of helpful of Set-Up Guidelines for precision widebelt sanding.

Carter Products has been a leading supplier of productivity-enhancing products since 1929. Their line of band saw accessories is the broadest in the industry, including guides and tires for nearly every model of bandsaw on the market, past and present. Carter also offers a full range of guide line, laser positioning and inspection lighting, the innovative Carter Flip-Pod[®] vacuum part holddown system for CNC manufacturing, precision calibration instruments for widebelt sanding applications, and many other products.
