CARTER PRODUCTS RE-ENGINEERS POPULAR INSPECTO LIGHT

Grand Rapids MI • Often, the simplest solution is also the most effective. Carter Products has proven that for years with their exceptionally successful range of Inspecto Lights®. With its bright light revealing surface imperfections, the line has proven particularly useful for quality control in widebelt sanding, hand-sanding using a downdraft table, and veneering processes.

Now, while keeping simplicity and ease of use at the forefront, Carter has re-engineered the Inspecto Light for even greater utility and durability, featuring advanced electronics and circuitry.

In addition to the electronics, Carter has added a lens-tilt feature that allows up to 15 degrees of articulation in the light angle, creating even greater surface contrast. The non-glare, flat beam bulbs improve visibility while reducing eye fatigue. The new stand for the Inspecto Light is also more readily adjustable and more stable than previous models.

Powered by a 12-volt transformer which keeps heat to a minimum, the new Inspecto Light housing improves ventilation to the lighting fixtures, for even greater bulb life.

As with all the Inspecto Light products, the new version allows users to quickly survey a worksurface or part for scratches, dents or other defects. Casting a bright field of light across the inspection area, the Inspecto Light causes imperfections to stand out in sharp relief. This allows for damaged parts to be re-worked prior to the application of expensive finishing processes and materials.

Carter Products has been a leading supplier of productivity-enhancing products since 1929. Their line of band saw accessories is the broadest in the industry, including guides and tires for nearly every model of bandsaw on the market, past and present. Carter also offers a full range of precision laser systems for pattern projection, templating and positioning, as well as line lasers. In addition to inspection lighting, other products include the innovative Carter Flip-Pod® vacuum part holddown system for CNC manufacturing, precision calibration instruments for widebelt sanding applications, and much more.
