CARTER PRODUCTS ADDS MAGFENCE™ UNIVERSAL FENCE TO LINE

Grand Rapids MI • Continuing their commitment to expanding the industry's largest line of productivity enhancement products, Carter Products is pleased to introduce their new MagFence™. The MagFence is the easy, fast, cost-effective way to attach a rip fence to most popular band saw models, table saws, or any other device with a ferrous-metal table.

The Carter MagFence is a more flexible, less-expensive, alternative to other fences on the market today. It is ready to use right out of the box and requires no modification of your bandsaw or table. It can also be used as a table extension by placing it horizontal to the saw work surface.

The MagFence requires no hardware or tools. It employs a series of powerful magnets to stay firmly in place. It is not for use on aluminum tables.

Available in two lengths, 16" and 19.5", the engineering of the MagFence is brilliant in its simplicity. Levers on each end of the fence engage and disengage the magnets, allowing for swift adjustments. No additional tools, hardware or clamps are required. And, because it is not permanently mounted, it can be easily used on many workshop table surfaces.

The MagFence is now available on-line at www.carterproducts.com and at leading aftermarket distributors of woodworking tools and supplies. Watch for a full line of accessories to complement the MagFence, including feather boards, a circle-cutting attachment and more.

Carter Products has been a leading supplier of productivity-enhancing products since 1929. Their line of band saw accessories is the broadest in the industry, including guides and tires for nearly every model of bandsaw on the market, past and present. Carter also offers a full range of guide line, laser positioning and inspection lighting, the innovative Carter Flip-Pod® vacuum part holddown system for CNC manufacturing, precision calibration instruments for widebelt sanding applications, and many other products.
