CARTER PRODUCTS INTRODUCES NEW LINE OF MICRO-ADJUST™ BANDSAW GUIDES

Grand Rapids MI • Continuing their decades-long practice of engineering the best enhancements for bandsaws, Carter Products introduces their new Micro-Adjust Premium Guides™ for use on saws from several major manufacturers.

Now available for Jet, Delta, and Rikon 14" saws, the Micro-Adjust Premium Guides provide precision, tool free control over key guide adjustments to maximize your saw's cutting performance. All guide adjustments can now be made quickly and easily by hand. Users will realize the greatest cutting accuracy and longest blade life with these new Carter upgrades.

The Micro-Adjust Guides™ are packaged in easy-to-install conversion kits for most popular saw models. Each kit includes all mounting hardware and full installation instructions. With these kits installed, friction is greatly reduced due to the rolling bearings that contact the side of the blade. This results in a cooler blade, longer blade life, and smoother cuts.

Micro-Adjust Premium Guides have a rugged ball bearing design, yet are exceptionally compact. Bearings are sealed and permanently lubricated. The new Micro-Adjust Guides adjust forward, backward and side-to-side for maximum flexibility, accommodating blades from 1/8" to 1" wide. The unique tool-less adjustment feature greatly simplifies the task of keeping your saw in optimum configuration at all times.

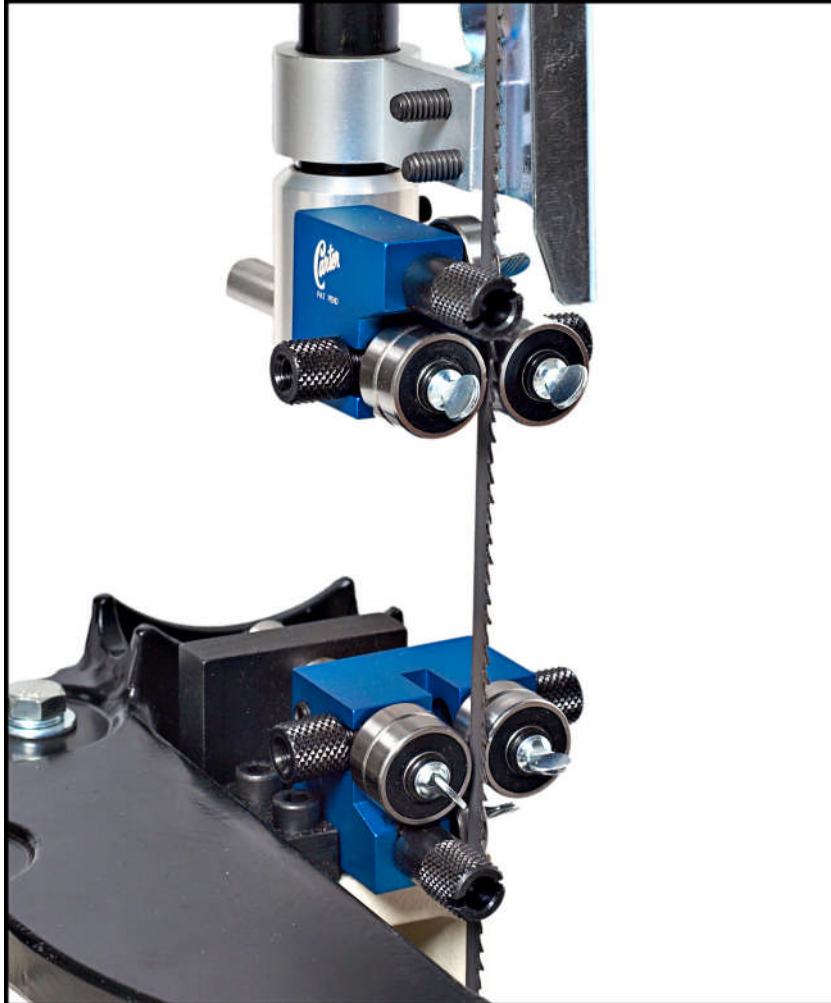

Carter Products has been a leading supplier of productivity-enhancing products since 1929. Their line of band saw accessories is the broadest in the industry, including guides and tires for nearly every model of bandsaw on the market, past and present. Carter also offers a full range of guide line, laser positioning and inspection lighting, the innovative Carter Flip-Pod® vacuum part holddown system for CNC manufacturing, precision calibration instruments for widebelt sanding applications, and many other products.
