## **CARTER DIGITAL DEPTH GAUGE IMPROVES SANDING QUALITY AND REDUCES COSTS**

*Grand Rapids MI* • Proving again that the best ideas are the simplest, Carter Products introduces the Carter Digital Depth Gauge. Used to help set up and calibrate widebelt sanders, the Digital Depth Gauge improves output and reduces abrasive belt costs.

Over 90% of the widebelt sanders in operation today are set up incorrectly. The result is inconsistency, streaking, and poor surface quality on panels. It also means that belt life is shortened considerably, increasing downtime, maintenance expense, and belt costs.

The Digital Depth Gauge has a stable base for accuracy and repeatability, offers accuracy to 0.0005 in., an easy-to-read digital readout, simple selection of inches or millimeters, and an electronic zeroing function for quick comparisons between measurements.

After running a sample panel through your widebelt sander, the Carter DDG gives you a precise look at the performance of each of your sanding units based on the amount of material removed. Recalibration of the heads will result in the quality improvements and cost-savings you are seeking.

Available for \$295.00, the DDG comes with a Widebelt Sander Setup Guide that offers detailed analysis of common sander problems and full instructions on how to best utilize the unit.

Carter Products has been a leading producer of productivity-enhancing products since 1929. In addition to a full range of guide line and laser positioning lights, Carter offers the innovative Carter Flip-Pod® vacuum part holddown system for CNC manufacturing, a full range of band saw accessories for hobby and industrial use, inspection lights, and other products.
