GENERAL DESCRIPTION & FEATURES

Features

- R&TTE (EN 300 220) / RoHS compliant
- 1 mW / 10 mW selectable
- Frequency selection free in 128 channels for 433 MHz
- · High sensitivity receiver
- FM narrow band modulation

Applications

- · Radio remote control cranes and machines
- Factory automation M2M
- Security systems
- Alarms
- Telemetry systems

Models

| Model name | TX/RX | Ch setting |
|----------------------|-------------|----------------|
| CDP-TX-02F-R 434MHz | Transmitter | Dip switches |
| CDP-RX-02F-R 434MHz | Receiver | Dip switches |
| CDP-TX-02FP-R 434MHz | Transmitter | Pin connectors |
| CDP-RX-02FP-R 434MHz | Receiver | Pin connectors |

For the CDP-TX/RX-02F-R, frequency setting is performed with the 7-bit switches. Instead of these 7-bit switches, the CDP-TX/RX-02FP-R has 14-pin connectors for frequency setting, making it possible to set the channels externally.

There are no other technical and mechanical differences between CDP-02F-R and CDP-02FP-R.

General description

The CDP-TX-02F-R and CDP-RX-02F-R are an RoHS compliant, embedded industrial narrowband FM radio transmitter and receiver.

They are suitable for various application fields such as wireless data communication, remote control, telemetry or wireless security systems. They are easy to use and integrate into application systems. Both CDP-TX-02F-R and CDP-RX-02F-R are equipped with a frequency synthesizer system with micro controller. Available frequency ranges are from 433.1875 MHz to 434.7750 MHz (128 channels). The compact size, low operating voltage and frequency selectability of the CDP-02F-R make it ideal for various applications where its interference rejection and practical distance range is far better than similar RF modules based on wide band SAW-resonator frequency generators.

The CDP-RX-02F-R receiver has excellent blocking and adjacent channel selectivity.

SPECIFICATIONS

CDP-TX-02F(P)-R Transmitter

All ratings at 25°C +/- 5°C unless otherwise noted

| Communication method One way Emission class F1D Operating frequency range 433.1875 – 434.7750 MHz Operating temperature range -20 to + 60°C No dew condensation Storage temperature range -30 to + 70°C No dew condensation Aging rate Max. +/- 1 ppm / year TX freq. / RX Local freq. Specifications are subject to change without prior notice

Initial frequency tolerance is defined as frequency drift within 1 year after the final adjustment

Valid output signal is determined at the point where the Bit Error Rate meter starts detecting a 4800bps, 1010.. repeated signal.

The valid output signal varies with the temperature conditions. You must conduct field testing to verify the waiting time for a valid output signal in the user system.

^{*1} Initial frequency tolerance: At delivery

^{*2} Time to valid output signal:

PIN DESCRIPTION

CDP-TX-02F(P)-R

| Pin name | I/O | Description | Equivalent circuit |
|----------|-----|---|--|
| ANT | 0 | RF output terminal Antenna impedance nominal 50 Ω | ANT 27nH 27nH D 7P 12P 7P |
| GND | I | The ground for the power supply. Connect it to the ground plane as well as to the bottom part of the case. The ground plane has an impact on the range and the stability of operation. | |
| VCC | I | The power supply terminal. The supply voltage is DC 3.0 to 12 V. Power supply noise and ripple have an impact on performance, so eliminate them as far as possible with filters and capacitors. | 2.7V TK11327CM TK11327CM + 1000 N N N N N N N N N N N N N N N N N |
| DATAIN | I | Digital data input terminal Interface voltage: H = Vcc L = GND | 1k DATAIN RN1308 |

^{*} Channel No. 127: Default setting

Channel Table

7 bit switch: ON = L (GND) OFF = H (Open)

PIN status: ON = L (Short to GND pin) OFF = H (Open)

Position of the SW and Pins.

POWER SETTING

CDP-TX-02F(P)-R can be set to either 10 mW or 1 mW by a jumper on the PCB.

Power Setting (Switch: ON = "L" / OFF = "H")

10 mW: Jumper ON (Default) 1 mW: Jumper OFF

Note:

The power level limit of the 434 MHz ISM band in Europe is defined as below. Please choose the maximum

power and duty cycle allowed by the regulations.

| Frequency band | Power | Duty cycle | Channel spacing |
|---------------------------|-------------------------------|------------|-----------------|
| 433.050 MHz – 434.790 MHz | 10 mW e.r.p. | <10% | No spacing |
| 433.050 MHz – 434.790 MHz | 1 mW e.r.p. - 13 dBm/10kHz | Up to 100% | No spacing |
| 434.040 MHz – 434.790 MHz | 10 mW e.r.p. | Up to 100% | Up to 25 kHz |

ANTENNAS

The most important factors for safe data transmission are a good antenna and RF grounding, both for the transmitter and the receiver. Without an antenna it is impossible to transmit data over a long distance.

The standard antenna is a Lambda/4 wire protected by a plastic cover.

The receiver has a simple antenna input pin. Any suitable UHF antenna can be connected to it.

The easiest way to connect an antenna to the CDP-RX-02F-R is to solder a 17 cm wire directly to the antenna input. A 50 Ohm coaxial cable can be used to extend the distance between the antenna and the receiver. The shielding of the antenna wire should be soldered to the case near the antenna input of the CDP-RX-02F-R.

It is possible, but not recommended to connect the receiver module and the antenna by a connection on the PCB. This will decrease the receiver performance in most cases.

To find the best method of installation for the transmitter and receiver, many things should be considered and tested. It is recommended that you read specialized literature on antennas and radiation characteristics to gain a better understanding of these fields. A detailed explanation cannot be given here.

Notice: For CDP-TX-02F-R and CDP-TX-02FP-R, use the antenna provided. Using other antennas may invalidate compliance with the regulatory standards. Refer to the REGULATORY COMPLIANCE INFORMATION in this document.

In most cases the following basic rules will help you.

- Connect an antenna with 50 Ohm impedance for 434 MHz.
- The easiest construction is a wire of approximately 17 cm.
- Place the antenna vertically, straight up or down from the transmitter and receiver module.
- Do not cover the antenna with metal parts.
- The connection of the metal surface of the transmitter and receiver case to a larger metal part (ground plane) will increase radiation and reception efficiency. These metal parts should not be placed near the antenna.
- The best range is achieved if the transmitter and receiver antenna are in direct line of sight. Any object in between the transmitter and receiver antenna, and metallic objects in particular, will decrease the range.
- The transmission is influenced by reflections of the transmitter signal on metallic surfaces. By overlaying the direct and reflected signal with a 180 degree phase shift the signal can almost fade out. These reflections and fade-outs can result in data drop-outs in mobile applications.
- The human body can have a similar effect as metal objects. Pocket transmitters should be held in your hand, held in a position away from the body and pointed in the direction of the receiver.

Regulatory compliance information

Regulatory compliance of the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R

The CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R are designed for embedding in other equipment. (Products incorporating the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R are henceforward referred to as final products.) The European regulation applicable to the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R is the R&TTE Directive 1999/5/EC.The conformity assessment for the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R was completed in accordance with the R&TTE Directive Annex II (RX) and III (TX) procedures, and the Declaration of Conformity is attached to this manual.

Note: The CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R are intended to be used in CEPT countries. There may be restrictions in the following countries; AZE, GEO, RUS, UKR.

Cautions related to regulatory compliance when embedding the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R

1. Duty cycle

The CDP-TX-02F(P)-R is designed to be used for the Non-Specific Short Range Devices defined in the ERC/REC 70-03 Annex 1.

The CDP-TX-02F(P)-R continuously emits carrier signals when power is supplied. The user must design the final product to meet the requirements of the duty cycle as provided in the *Regulatory parameters related to Annex 1* of the ERC/REC 70-03.

2. Antenna

The CDP-TX-02F(P)-R is supplied with a dedicated antenna and the conformity assessment of the CDP-TX-02F(P)-R was performed using the dedicated antenna (Circuit Design's standard antenna ANT-LEA-01, 1/4 lambda lead antenna). If you use an antenna other than the dedicated annuena or an antenna with equivalent characteristics and performance, further radio conformity assessment may be required.

3. Supply voltage

The CDP-TX-02F(P)-R should be used within the specified voltage range (3.0 V to 12 V).

4. Enclosure

To fulfill the requirements of EMC and safety requirements, the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R should be mounted on the circuit boards of the final products and must be enclosed in the cases of the final products. No surface of the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R should be exposed.

Conformity assessment of the final product

The manufacturer of the final product is responsible for the conformity assessment procedures of the final product in accordance with the R&TTE Directive.

As to the conformity assessment of the R&TTE Directive Article 3.2 (Efficient use of the radio spectrum), the manufacturer of the final product incorporating the R&TTE assessed CDP-TX-02F(P)-R and CDP-RX-02F(P)-R will be exempted from its conformity assessment procedures. For details of how to use the conformity assessment of the CDP-TX-02F(P)-R and the CDP-RX-02F(P)-R, please consult the relevant authorities or accredited certification bodies.

Notification of the final product

The notification required by R&TTE Directive Article 6 (4) is not necessary if the final product is used in the harmonized frequency band and is classified as Class-1 equipment. If the final product is not used in the harmonized frequency band and is classified as Class-2 equipment, the manufacturer of the final product has a duty to notify the relevant radio regulatory authorities in the countries where the final product is sold.

*NOTE: In case the CDP-TX-02F(P)-R 434MHz is used with more than a 10% duty, notification of the final product will be required. A list of Class-1 equipment is available at http://www.ero.dk/.

Exemption clause

Circuit Design, Inc does not guarantee the accuracy of the above mentioned information about the conformity assessment and notification of the final product. Directives, technical standards, principles of operation and the like may be interpreted differently by the authorities in each country. Also the national laws and restrictions vary with the country. In case of doubt or uncertainty, we recommend that you check with the authorities or official certification organizations of the relevant countries.

DECLARATION OF CONFORMITY

Directive 99/5/EC (R&TTED)

Manufacturer:

Circuit Design, Inc.

Address:

7557-1, Hotaka, Azumino-city, Nagano 399-8303

Japan

We declare on our responsibility, that the following product:

Kind of equipment:

UHF Narrow band multi-channel transmitter & receiver

Type-designation:

CDP-TX-02F-R 434 MHz CDP-TX-02FP-R 434 MHz CDP-RX-02F-R 434MHz CDP-RX-02FP-R 434MHz

is in compliance with the essential requirements of §3 of the R&TTED.

Health and safety requirements pursuant to §3(1)a:
 Applied Standard(s) or other means of providing conformity:

EN 60950-1 EN 62479

- Protection requirements concerning EMC §3(1)b: Applied Standard(s) or other means of providing conformity:

EN 301 489-3 V1.6.1

- Measures for the efficient use of the radio frequency spectrum §3(2) Applied Standard(s) or other means of providing conformity:

EN 300 220-2 V.2.4.1 Receiver category 2

Hotaka, Japan June 17, 2016

Masayasu Komiyama.

Executive General Manager, Engineering Div

Circuit Design,Inc.

Important notice

- Customers are advised to consult with Circuit Design sales representatives before ordering.
 Circuit Design believes the provided information is accurate and reliable. However, Circuit Design reserves the right to make changes to this product without notice.
- Circuit Design products are neither designed nor intended for use in life support applications where
 malfunction can reasonably be expected to result in significant personal injury to the user. Any use of Circuit
 Design products in such safety-critical applications is understood to be fully at the risk of the customer and
 the customer must fully indemnify Circuit Design, Inc for any damages resulting from any improper use.
- As the radio module communicates using electronic radio waves, there are cases where transmission will be temporarily cut off due to the surrounding environment and method of usage. The manufacturer is exempt from all responsibility relating to resulting harm to personnel or equipment and other secondary damage.
- The manufacturer is exempt from all responsibility relating to secondary damage resulting from the operation, performance and reliability of equipment connected to the radio module.

Copyright

Cautions

- Do not use the equipment within the vicinity of devices that may malfunction as a result of electronic radio waves from the radio module.
- Communication performance will be affected by the surrounding environment, so communication tests should be carried out before actual use.
- Ensure that the power supply for the radio module is within the specified rating. Short circuits and reverse connections may result in overheating and damage and must be avoided at all costs.
- Ensure that the power supply has been switched off before attempting any wiring work.
- The case is connected to the GND terminal of the internal circuit, so do not make contact between the '+' side of the power supply terminal and the case.
- When batteries are used as the power source, avoid short circuits, recharging, dismantling, and pressure. Failure to observe this caution may result in the outbreak of fire, overheating and damage to the equipment. Remove the batteries when the equipment is not to be used for a long period of time. Failure to observe this caution may result in battery leaks and damage to the equipment.
- Do not use this equipment in vehicles with the windows closed, in locations where it is subject to direct sunlight, or in locations with extremely high humidity.
- The radio module is neither waterproof nor splash proof. Ensure that it is not splashed with soot or water. Do not use the equipment if water or other foreign matter has entered the case.
- Do not drop the radio module or otherwise subject it to strong shocks.
- Do not subject the equipment to condensation (including moving it from cold locations to locations with a significant increase in temperature.)
- Do not use the equipment in locations where it is likely to be affected by acid, alkalis, organic agents or corrosive gas.
- Do not bend or break the antenna. Metallic objects placed in the vicinity of the antenna will have a great effect on communication performance. As far as possible, ensure that the equipment is placed well away from metallic objects.
- The GND for the radio module will also affect communication performance. If possible, ensure that the case GND and the circuit GND are connected to a large GND pattern.

Warnings

- Do not take a part or modify the equipment.
- Do not remove the product label (the label attached to the upper surface of the module.) Using a module from which the label has been removed is prohibited.

Application note (Design guide for RF transmitter and receiver)

The following problems generally apply to radio modules

| Problem | Solution |
|--|---|
| Touching or moving the antenna changes its impedance, which | Fix the position of the antenna to avoid moving it. |
| causes variations in emission power. The variation appears as | Positioning of the antenna is an important factor in operating the radio module |
| distortion in the modulating signal and causes communication errors. | efficiently. |
| If a change in the circuit length occurs due to the on/off of switch etc. | |
| in the electronic circuit connected to the radio module in the system | Add bypass capacitors of 100 to 470 pF in the immediate vicinity of the switches. |
| in which the radio module is integrated, the high frequency electric | Make the area beneath the radio module a ground pattern, utilizing part of the shield. |
| potential can vary, disturbing the modulating signal, leading to communication errors. | |
| If the power line and/or the signal input line are long the printed line | |
| can be subject to high frequency noise. This noise may cause | Block high frequency elements by adding a choke coil to each line. |
| communication errors. | block high frequency elements by adding a choke con to each line. |
| | In order to fix the receiver to the PCB strongly, solder the case to the PCB. |
| Circuit Design's receivers are designed to be vibration resistant. | When using a radio receiver where vibration is always present, use a shock absorber |
| However there is a limit to the amount of shock and vibration the | or fix the PCB at the vicinity of the four corners of the receiver module in addtion to |
| module can sustain due to its construction. | fixing the four corners of the PCB on which the radio module is mounted. |
| Circuit Design's receivers are designed for high sensitivity. They will | |
| obtain radio signals over long distances. On the other hand, the | Make the area beneath the radio module a ground pattern, utilizing part of the shield. |
| receiver is sensitive to noise from the microcomputer and | Block high frequency elements by adding a choke coil to each line. |
| surrounding digital circuits due to its high sensitivity. | |

For stable operation, it is recommned to solder the shield case to PCB wide plane GND

Soldering point

A PCB example built for CDP-TX-02E taking into consideration the above points is shown below.
