

Conflict Minerals Policy

CET Technology, LLC designs and manufactures magnetic components such as inductors and transformers, and switch mode power supplies. One of the essential materials used in the manufacture of our products is tin, which is considered a conflict mineral under the Dodd-Frank ACT, Section 1502.

As a privately held company that does not file reports with the SEC, CET Technology LLC is not bound by the Conflict Minerals provision of the Dodd-Frank Act. However, we recognize that many of our customers are. In support of those customers, CET Technology has adopted the policy throughout its supply chain that all tin used in our products must be sourced from conflict free smelters outside the Democratic Republic of the Congo and adjoining countries.

CET Technology LLC provides Conflict Mineral Declaration information at a product scope level to customers upon request.
