
GRUPPO **disano** ●

I colori di un affresco antico o di un quadro di un maestro del Rinascimento sono parte essenziale del valore storico e culturale dell'opera. Le scelte di illuminazione possono restituirci questi colori nella loro realtà originaria o, al contrario, irrimediabilmente falsati. È solo un esempio di quale sia la delicatezza e l'importanza delle scelte illuminotecniche nel settore dell'arte e dei beni culturali, in cui vanno considerati anche i rischi legati al deterioramento dei materiali. Le nuove tecnologie offrono oggi straordinarie possibilità. Pensiamo ad esempio ai LED, che grazie all'assenza di emissioni ultraviolette rendono l'illuminazione sicura anche su materie e colori estremamente delicati. Pensiamo anche alle possibilità di gestione e programmazione della luce, in grado di valorizzare un'esposizione artistica con effetti scenografici. La Disano illuminazione ha maturato una grande esperienza con realizzazioni che vanno dai grandi impianti in alcuni dei siti monumentali più importanti d'Italia (dalla Cappella degli Scrovegni di Padova al tempio di Hera di Selinunte) fino ai piccoli musei e a esposizioni temporanee, senza dimenticare grandi mostre ed importanti eventi culturali.

The unique colours of an ancient fresco or a Renaissance masterpiece are an essential part of the historic and cultural value of the work itself. Lighting solutions can either return these colours to their original glory or misrepresent them totally. This is just one example of how delicate and important the choice of lighting systems can be when applied to art, combined, as it often is, with the risks linked to the deterioration of precious materials. Today, the new technologies offer extraordinary possibilities in this sector. Think, for example, of LEDs: the lack of UV emissions means that lighting is safer even for extremely delicate materials and colours. Think, too, of the possibilities offered by light management and programming systems, which are capable of enhancing an art exhibition with spectacular lighting effects. Disano Illuminazione has accrued an extensive experience in the sector, with achievements ranging from lighting systems in some of Italy's major monuments and historic sites (including the Scrovegni Chapel in Padua and the Temple of Hera at Selinunte) to smaller museums and temporary exhibitions, not forgetting major art shows and cultural events.

Les couleurs d'une fresque ancienne ou d'une toile réalisée par l'un des maîtres de la Renaissance font partie de la valeur historique et culturelle de son œuvre. Les choix qui concernent l'éclairage peuvent nous restituer ces couleurs soit dans leur réalité originale soit irrémédiablement faussées. Ce n'est qu'un exemple qui témoigne de la délicatesse et de l'importance des choix illuminotechniques relatifs à l'art, auxquels s'ajoutent les risques liés à la détérioration des matières. Aujourd'hui, les nouvelles technologies offrent de nombreuses opportunités formidables dans ce domaine. Songeons par exemple aux LED qui permettent d'obtenir un éclairage sans risque même sur toutes les matières et les couleurs extrêmement délicates, grâce à l'absence des émissions ultraviolettes. Songeons aussi aux possibilités de gestion et programmation de l'éclairage, qui permettent de valoriser les expositions d'art par des effets scénographiques. Disano a accumulé une expérience fort remarquable dans ce domaine, avec des réalisations qui vont des grandes installations chez certains des sites monumentaux les plus importants jusqu'aux petits musées et aux expositions temporaires, sans oublier les grandes expositions.

Los colores de un fresco antiguo o de un cuadro de un maestro del Renacimiento son parte esencial del valor histórico y cultural de la obra. El alumbrado elegido puede restituirnos estos colores en su realidad original o, por el contrario, puede distorsionarlos irreparablemente. Es solo un ejemplo de lo delicado e importante que es elegir las luminarias apropiadas para el arte, y a esto hay que añadir los riesgos relacionados con el deterioro de los materiales. Las nuevas tecnologías ofrecen hoy posibilidades extraordinarias en este sector. Pensemos, por ejemplo, en los LEDs, que merced a la ausencia de emisiones ultravioletas hacen que la iluminación sea muy segura, incluso sobre materias y colores muy delicados; en la posibilidad de gestionar y programar la luz, para resaltar una exposición artística con efectos escenográficos. Disano illuminazione ha madurado una gran experiencia en dicho sector con actuaciones que abarcan desde grandes instalaciones en algunos de los sitios monumentales más importantes de Italia (de la Capilla de los Scrovegni de Padua al templo Hera de Selinunte) hasta los pequeños museos y las exposiciones temporales, sin olvidar las grandes exposiciones.

Краски творений искусства: античных фресок, шедевров Ренессанса и т.д., - являются неотъемлемой частью их культурной и исторической ценности. От грамотного выбора освещения зависит, дойдут ли до нас эти первозданные краски или будут непоправимо искажены. Это только один пример ответственности, необходимой при выборе системы освещения для творений искусства, что связано с риском износа материалов. Новые технологии открывают удивительные возможности в этом секторе. Возьмем например, СИД, в свете которых отсутствует УФ составляющая, благодаря чему светодиодное освещение надежно даже для деликатных материалов и красок. Представим себе также возможности регулирования и программирования освещения, позволяющие обогатить художественные выставки чисто театральными световыми эффектами. Дизано имеет большой опыт реализации проектов в этом секторе: от крупных систем, созданных для известных итальянских монументальных ансамблей (от Капеллы дельи Скровеньи в Падуе до храма Геры в Селинунте), до маленьких музеев и временных выставок.
