

Bending dies are designed to customer specifications and machined in the Eagle Stainless tool room.

## Bending / Coiling Unique Configurations

### Bending

The ability to bend tubes without excessive distortion, wrinkling or fracturing is an art born of experience. Eagle's skilled craftsmen working with state-of-the-art machinery supply uniformly smooth bends - meeting the tightest customer specifications and assuring satisfactory performance.

All tooling is engineered and manufactured in-house. Sample parts show the wide range in size capability.

### Coiling

For over two decades Eagle Stainless has been delivering some of the most intricately coiled stainless steel tubes imaginable. Working on diameters ranging from .040" to 1.00" we're ready to meet the needs of your most demanding custom tubing application.

Shown above is one of the new, high precision, bending machines currently in operation at Eagle.
