ENGELKING IS EXHIBITING AT ELECTRONICA2012

International Trade-Fair is taking place from 13.-16. November in Munich

Engelking Elektronik GmbH, which is known for its big portfolio of connectors and switches and other electromechanical components, will be exhibiting at the electronica2012 trade fair.

Engelking is presenting its known range of switches, battery and fuse holders and additionally a small (12mm) metal pushbutton and a nanokinetic illuminated switch, which is freely configurable and programmable. New M8, M12, valve and automotive connectors will be introduced during the electronica2012.

They will be displaying the new 6000er Buccaneer Series from Bulgin. A Push-Pull connector series with IP69K approval. Additionally the IEC-Lock will be shown, a self locking IEC connector. Those two connector types open up a lot of new possibilities for many applications.

Besides that, Engelking will present their new partner company Techno. Distributing the products of the Italian company increases the offer of waterproof connection solutions. For example Techno offers innovative solutions for electrical connections with high performance. One product is the TH386, a connector which can be mounted on pipes without locking nut. Only a hole has to be drilled, the connector put in and turned tight. This makes the installation easy and fast.

Engelking Elektronik GmbH will present a big range of products at the electronica2012. Just go and find out more about Engelking Elektronik GmbH. You will find them in Hall B3, Booth 271.
