

EJOCLEAN®

Technical cleanliness through optimal processes and analysis

Increased customer demands

The standards for the cleanliness of components have been increasing significantly, as even the smallest impurities on component surfaces can have serious consequences in many areas. The areas of possible impact on function or safety include visual defects, e.g. displays or headlight systems, as well as safety related influences such as unwanted contact of electronic systems.

With the innovative EJOCLEAN® programme EJOT has been offering individual customer solutions to use „clean“ fasteners in the assembly line. To realise and monitor the cleanliness objectives, EJOT employs state of the art equipment and analysis technology.

Technical cleanliness

The concept of „technical cleanliness“ according to VDA 19, VDA 19.2 and ISO 16232 describes cleanliness with regards to particle purity.

EJOCLEAN® Clean room

Industrial component cleaning unit with enclosed conveyor belt for the transport of ultra-fine cleaned goods into the clean room

EJOCLEAN®		
	Grade 1	Grade 2
Largest acceptable particle*	800 µm	400 µm
Recommended Drawing specification	X = 800 µm according to VDA 19 / ISO 16232	CCC = A (I-K00) to VDA 19 / ISO 16232 or X = 400 µm according to VDA 19 / ISO 16233
<small>Note: In individual cases deviations from these values are possible and not all surface coatings are available with an EJOCLEAN® grade. Different specifications have to be agreed upon separately. Also see EJOT company standard WN 0960 and VDA19. * The particle definition corresponds to VDA 19, fibres have to be considered separately.</small>		

EJOCLEAN® Grade 1 & 2 limit values „maximum acceptable particle size“

Classification according to VDA 19		Number of metallic particles	Number of non-metallic particle
Particle size class	Particle size distribution		
E	50 - 100 µm	6000	7000
F	100 - 150 µm	1000	1000
G	150 - 200 µm	300	300
H	200 - 400 µm	200	200
I-K	400 - 1000 µm	0	0

EJOCLEAN® Grade 2 limit values „maximum acceptable particle number“ in relation to 1000 cm² on a surface

Reliable process EJOCLEAN®

State of the art equipment ensures very high process reliability for the ultra fine cleaning of fasteners and formed elements.

Testing & packaging

Test laboratory

Test laboratory

Continuous process control in our own cleanliness laboratory.

Clean room

Since the finely cleaned elements are packaged in a clean room, re-contamination due to sedimentation of airborne particles is reliably prevented.

Clean room
