CO-FIRE CERAMIC TAPE

41020

RoHS Compliant Ceramic Tape for Multilayer and Microwave Applications Requiring Dielectric Constant ~ 8

The 41020 is a flexible cast film of inorganic dielectric powder dispersed in an organic matrix. It is designed to be fired at 850°C to 875°C to give a dense body. Multilayer parts can be formed by laminating metallized sheets of the tape into a monolithic structure prior to firing. A pressure/temperature combination of 21 MPa and 70°C works well for laminating this tape. Ceramic tape is provided on a silicone coated polyester film to minimize environmental contamination, to protect it from mechanical damage, and to aid in handling. This material is useful in microwave applications that require low dielectric constant.
