

ELM86xxxxBxA CMOS Dual 400mA LDO Regulator

<http://www.elm-tech.com>

■ General description

ELM86xxxxBxA is dual CMOS Voltage Regulator which consists of 2 large current LDOs. With the chip enable function of each channel, it is possible to control on/off independently. This chip enable control is managed by positive logic. The standby current is designed to be Typ.0.1 μ A. ELM86 series is available only in SOT-26 PKG, while the output voltage is fixed within the range of 1.2 to 4.0V. The internal short protection function will limit output current when VOUT pin is in short condition; meanwhile, thermal protection circuit will shut off the output voltage and current when an unusual high chip temperature is detected.

■ Features

- Output voltage range : 1.2V to 4.0V (by 0.1V)
- Input-output voltage difference : Typ.120mV(Vout=3.0V, Iout=100mA)
- Standby current consumption : Typ.0.1 μ A
- Current consumption : Typ.25 μ A
- Input stability : Typ.0.02%/V(Iout=40mA)
- Load stability : Typ.5mV(1mA \leq Iout \leq 100mA)
- Accuracy of output voltage : \pm 2.0%(Vout>1.5V),
 \pm 30mV(Vout \leq 1.5V)
- Short circuit current limiter : Typ.40mA(Vout=0V)
- Thermal shutdown protection : Typ.165 $^{\circ}$ C
- Package : SOT-26

■ Application

- Portable electronics
- Wireless devices
- Cell phones
- Battery-operated devices

■ Maximum absolute ratings

Parameter	Symbol	Limit	Unit
Input voltage	Vin	Vss-0.3 to 10.0	V
CE1,CE2 Input voltage	Vce	Vss-0.3 to Vin+0.3	V
Vout1,Vout2 voltage	Vout	Vss-0.3 to Vin+0.3	V
Output current Iout1+Iout2	Iout	800	mA
Power dissipation	Pd	300	mW
Thermal resistance junction to ambient	R θ ja	400	$^{\circ}$ C/W
Operating Temperature	Top	-40 to +85	$^{\circ}$ C
Storage Temperature	Tstg	-55 to +125	$^{\circ}$ C
