**ESTERLINE TO EXHIBIT ADVANCED HUMAN-MACHINE INTERFACE SOLUTIONS
AT 2016 ASSOCIATION OF THE U.S. ARMY (AUSA) ANNUAL MEETING**

**Featured will be hardware and capabilities from Esterline's Korry, Mason,
Codis and Racal Acoustics brands at booth 6843**

Washington D.C., October 3, 2016 — Esterline Control & Communication Systems (ECCS), a division of Esterline Corporation (NYSE:ESL; www.esterline.com), will be showcasing its expertise in advanced human-machine interface (HMI) solutions at the 2016 AUSA Annual Meeting and Exposition, booth 6843, October 3-5, 2016, at the Walter E. Washington Convention Center, Washington D.C.

Four of the key Esterline brands — Korry, Mason, Codis and Racal Acoustics — will be exhibited at the show, providing a range of HMI solutions.

Esterline will showcase the Codis GVD-126 display, its new GVA-compliant video display. This latest addition to its lineup of Generic Vehicular Architecture (GVA) displays is a 10.4-inch rugged touchscreen that provides real-time imaging of network video streams as well as composite-analog and DVI inputs. It combines high-performance imaging in a compact footprint to deliver an ergonomic solution for space-constrained vehicle applications.

(more)

Among the broad selection of Codis rugged displays at the show will also be products selected for the U.K. AJAX program, including:

- TX-335S turret crew station displays, which present gunners and commanders with logistics, mission-system and gun-control information.
- TX-321S triple-head driver's displays to render a near-seamless 120-degree image of the route with selectable front or rear view in day or night vision.

On display from the Korry brand will be the Commander Data Entry Tool (CDET) keyboard, featuring area-lit LED dome-switch technology for exceptionally long life, lighting uniformity, color and brightness. Korry products were the first illuminated high-quality cockpit controls in the aerospace industry.

Showcased Mason products will include HMI controls engineered for rugged performance, including both rotary-aircraft cockpit controls as well as HaWC hand-held controllers for unmanned systems and ground missions. Mason HaWC controllers have been engineered for air, land and sea environments for both military and civilian applications.

In addition, Esterline will display its Racal Acoustics *ELITE* in-ear hearing protection system for state-of-the-art hearing protection, advanced local situational awareness and secure communications. Also on show will be Racal Acoustics high-performance Raptor medium-noise headsets, offering premium hearing protection, communication intelligibility and situation awareness. Raptor headsets are already deployed in over 300,000 Humvee vehicles.

For more information, please visit Esterline at the 2016 AUSA Annual Meeting and Exposition, booth 6843, October 3-5, 2016.

Esterline Control & Communication Systems (www.esterline.com/controlandcommunication) designs and produces leading technology control and communication components and subsystems for today's advanced requirements, focusing on delivering high-reliability human-machine interface (HMI) solutions to its customers across the globe. It is a wholly owned subsidiary of Esterline Corporation (NYSE: ESL), an international specialized aerospace and defense company headquartered in Bellevue, Wash., that employs about 13,000 people worldwide.
