ESTERLINE'S WORLD-LEADING COCKPIT SOLUTIONS FEATURED AT NBAA 2016

Fast-track version of popular Korry switch and Korry Utility Control System touchscreen display at NBAA-BACE, Orlando, Nov. 1 - 3, booth 3619

EVERETT, Wash., October 31, 2016 — Esterline's Korry Electronics, the industry leader in cockpit lighting solutions, will be showcasing its world-leading Korry 5/8-inch switches and its UCS touchscreen overhead display panel at NBAA-BACE this year.

The Korry 5/8-inch switch is the most popular of its kind, integrated into the majority of business aircraft flying today. Leading the way in cockpit lighting, the Korry dimmable LED-illuminated switch was introduced more than fifteen years ago, offering increased readability in varying light conditions.

New this year, many popular configurations of the Korry switch are now produced in just three days, at record low prices. With three-day turnaround now available, Korry switches once again set the industry standard for reliable, innovative cockpit solutions for the business aviation marketplace.

The Korry UCS touchscreen display offers a 75 percent reduction in separate display and switching components, and is currently flying on Gulfstream G500 and G600 long-range business jets. The display technology increases ease of use for the crew, with control panel functions more easily changed by updating software rather than hardware. The displays have an anti-fingerprint surface to ensure they remain readable, and the glass screen is designed for life-of-the-aircraft durability. In addition, the UCS touchscreen display has built-in triple-redundancy features to minimize the potential for failure. It is among several of Esterline's innovative touchscreen technologies on display at NBAA-BACE, booth 3619.
