FREQUENCY DEVICES™, INC.

90PF Slot Card

Introduction

Dual Channel Programmable Filter/Amplifier Card

Description

Each 90PF slot card provides two channels of precision, low noise and distortion (-100 dB typical) programmable filters with up to 60 dB of pre and 20 dB of post adjustable gain.

Filter modules are programmable from 0.1 Hz to 300 kHz utilizing 4, 11-bit tuning ranges. When assembled with a high-pass filter in channel one (1) and a low-pass filter in channel two (2), 90PF slot cards can be configured on the fly to operate as a low-pass, high-pass, band-pass, or band-reject (notch) filter. Customers can select any combination of two available filter modules per slot card to meet their application specific signal conditioning needs.

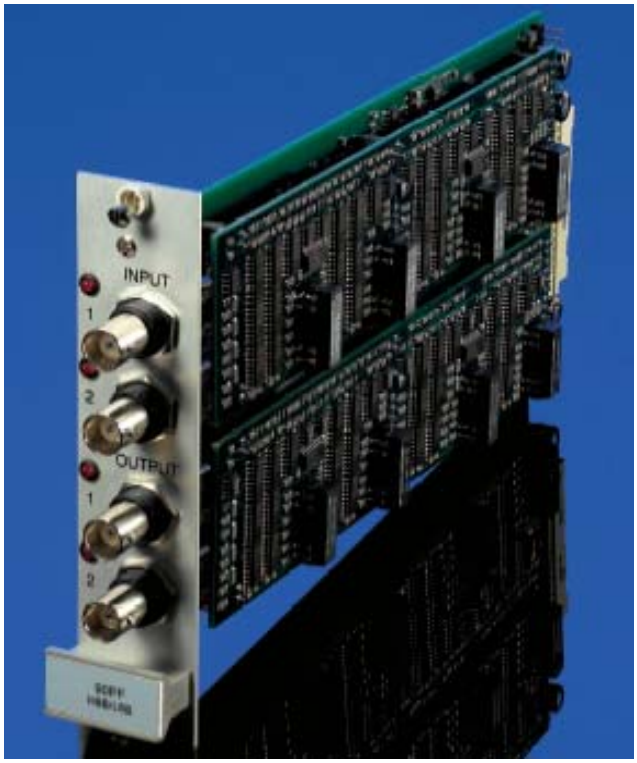
Front panel mounted BNC's provide easy access for connection of signal input and output. Other features include differential or single-ended input, AC or DC-coupled input, single ended output, LED clipping indicators and fine adjustment of DC offset. Operating the 90PF in filter BYPASS mode allows the design engineer to use each channel as a precision instrumentation grade programmable amplifier.

Features

- 0.1 Hz to 300 kHz Tuning Range
- Selectable single-ended or differential input
- Gain/phase matched channels
- LED clipping indicators
- Memory storage for up to 9 set-ups/slot card
- <-100 dB signal-to-noise ratio to 100 kHz BW
- Programmable gain, 60 dB pre and 20 dB post

Applications

- Anti-Aliasing
- Sound Measurement
- Noise Testing
- Audio Communications
- Medical Research
- Industrial Process Control
- Seismic Analysis
- Vibration Analysis



Available 90PF Low Pass Filters

Part #	dB	# Poles	Filter Type
L8B	-100	8	Butterworth
L8L	-100	8	Bessel
L8E	-88	8, 6-zero	Elliptic, 1.77
L8EX	-80≤100kHz -60>100kHz	8, 6-zero	Elliptic, 1.56
L8EY	-100	8, 6-zero	Elliptic, 2.00
L8D80	-80	8, 6-zero	Constant Delay
L8D10	-100	8, 6-zero	Constant Delay

Available 90PF High Pass Filters

Part #	dB	# Poles	Filter Type
H8B	-100	8	Butterworth
H8E	-88	8, 6-zero	Elliptic, 1.77
H8EX	-80≤100kHz -60>100kHz	8, 6-zero	Elliptic, 1.56
H8EY	-100	8, 6-zero	Elliptic, 2.00

Bypass Mode Specifications @ 25ºC

Dual Channel Programmable Filter/Amplifier Card

Input Characteristics

Input Impedance:	
Differential	2 MΩ shunted by 47pF
Single Ended	1 MΩ shunted by 47pF
Coupling	AC or DC
Maximum Input Signal	±10V pk @0 dB
Input Voltage:	
Linear Differential	20V p-p (Gain Set at 0 dB)
Max. Safe Differential	Any Continuous value between ±40V
Max Safe Common Mode	Any Continuous value between ±40V
Bias Current	1 nA typ., 2 nA max.
Common Mode Rejection Ratio with 2kΩ source unbalance and 0 dB gain	>60 dB, dc to 50kHz

Output Characteristics

Full Power Bandwidth	dc to 1.0 MHz
Small Signal Bandwidth (1V pk-pk)	1.0 MHz @ -6dB
Related Output	10V p-p for R_L = 50Ω 20V p-p for R_L = 2kΩ
Output Protection	short circuit to Ground only
Output Impedance	50Ω
Offset Voltage	Adjustable to zero, In 1 mV steps. (Range ±100mV dc)

General

Cross Talk between Channels	<-100 dB @ 1 kHz
Operating Temperature	0ºC to 50ºC
Offset Temperature Coeff.	10µV/ºC RTI
Humidity	0 to 95%, non-condensing
Slot Card Dimensions	100 x 220 mm (3U)
Weight	0.60 Lbs., (0.3 Kg.)

Amplifier Characteristics

Distortion @ 1 kHz	<-100 dB typ. @ 3.0 Vrms
Noise Density	14 nV/$\sqrt{Hz}$

Pre Filter Gain (No Filter)

Gain Settings	0 to 60 dB in 5 dB steps ±0.1 dB tolerance
Signal Bandwidth	-6.0 dB @ 1.0 MHz@ +60 dB
Amplitude Match	±0.1 dB @ DC
Gain Accuracy@ DC	±0.1 dB

Post Filter Gain (No Filter)

Gain Settings	0 to 20 dB in 1 dB steps ±0.1 dB tolerance
Signal Bandwidth	-6.0 dB @ 1.0 MHz
Amplitude Match	±0.1 dB @ DC
Gain Accuracy@ DC	±0.1 dB

Frequency Response

1. **Normalized Group Delay:**
The above delay data is normalized to a corner frequency of 1.0Hz.The actual delay is the normalized delay divided by the actual corner frequency (fc).

$$\text{Actual Delay} = \frac{\text{Normalized Delay}}{\text{Actual Corner Frequency (fc) in Hz}}$$
