

CC-S Buckets

Heavy Duty CC-S Style Polymer Elevator Bucket

► Product Testimonial

To whom it may concern:

In 2005 Topflight Grain rebuilt a main receiving leg in our La Place Illinois facility. Due to a number of worn or broken buckets, we decided to replace all of the buckets on the 10,000 bph concrete house receiving leg. All parts were replaced and leg capacity was not changed.

The replacement buckets used were the 4B CC-S style buckets. As advertised, shipping costs were reduced. Other benefits included reduced space needed to store the buckets while they awaited installation. Furthermore, there was a noticeable absence of grain carryover in the leg when placed back into service. Overall, the 4B CC-S elevator buckets were a good choice for us in our rebuild project.
