

GOLDMUND
SWISS MADE

Logos System Description:

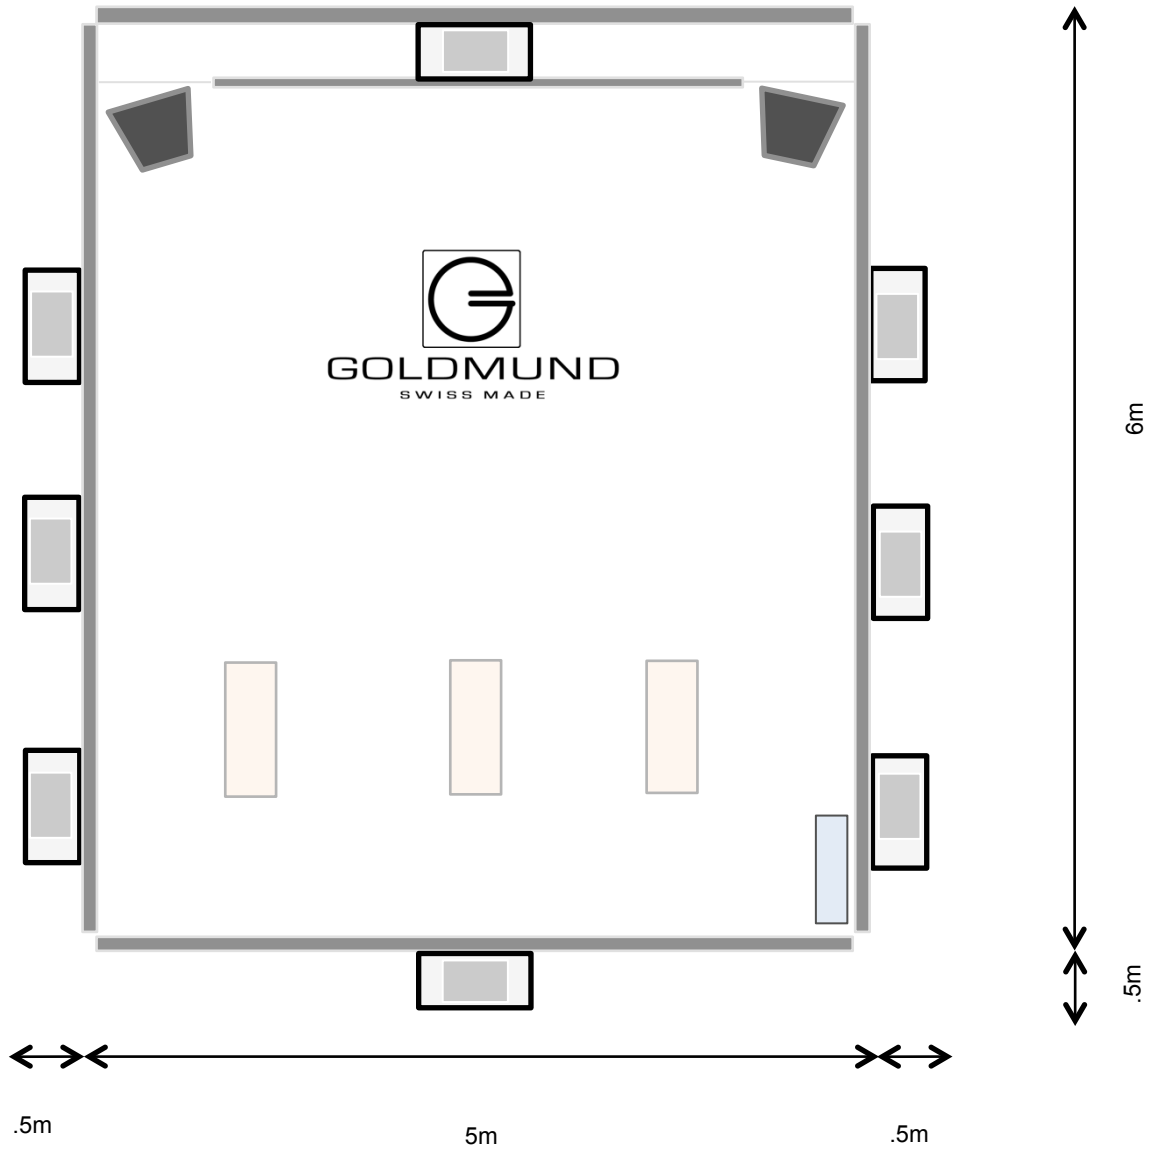

The fully customizable Logos system is very distinctive and will impress the people who want power, quality and flexibility. Designed for medium to semi large room, the Logos system can be made both as an in-wall design or as an external system, or a mix of both (external front speakers and in-wall surround speakers). Depending on the size and specificities of the room, the Logos system can provide up to 32 discrete channels. The Logos system gives a full liberty of customization thus enabling the most demanding customers to create their home theatre room to any specification with any décor and still can have the perfect sound.

The logos system comprises of Logos speakers, Logos Sub, Wall units, Processors, and Players. The Logos system incorporates Proteus and Leonardo, thereby recreating the clearest and most natural sound within the enclosed area. The Logos 3 Infra-subwoofers reproduces natural physical effects (deep vibrations) thereby adding an extra dimension to the whole experience.

Each Logos room is calculated by the Goldmund Acoustic Laboratory in Switzerland.

With innumerable possibilities the Logos system will astonish mind, body and soul.

Logos System Room Configuration Plan:

Logos
Wall

Logos
Sub

Brief Product description:

Logos 1N: The Logos 1N is an active speaker by Goldmund. The Logos 1N is fully constructed in metal which gives it the sleek and contemporary look making it suitable for any kind of décor and interiors. Compared to the Epilogue it is small but maintains the performance and quality. The Logos 1N uses mechanical grounding to evacuate vibration. In addition, it will soon be available in a wireless version.

Logos 2N: The Goldmund Logos 2N uses very innovative technology to achieve a unique level of definition and neutrality in a sub-bass speaker system. The Logos 2N is never used as a stand-alone speaker. Its most usual configuration is associated to one or more pairs of Logos 1N Speakers in a 2 channels or multi-channel speaker system.

Logos Frame: The Logos Frame is a metal frame constructed to hold the Logos 1N-2N together. The frame is constructed with utmost precision and dynamism to minimize vibrations and have a perfect hold on the speakers.

Logos Wall: The Logos Wall is an in-wall active speaker. It includes the Goldmund Leonardo and Proteus technology and uses a full digital filtering; the crossover is made by software inside the acoustic processor (Metis 8, 10, Mimesis 15, 16/16HD, 32) with the standard or personalized configuration file provided in the Goldmund Universal Configurator.

Logos Sub Wall: The Logos sub-wall is an active in-wall subwoofer. Its signal is treated with Proteus Technology with all its correction. Its particularity is to produce very neat and realistic bass when usual subwoofer sound particularly artificially redundant and boomy.

Logos 3 Active Kit: The specially designed Logos 3 infra-woofer creates bass and vibrations to such a distinctive level that the whole experience becomes more immersive and even physical. The active subwoofer includes built-in Goldmund amplifier which makes Logos 3 infra-sub stand out compared to any other commercial subwoofer. The sound produced under 20 kHz cannot be heard by human ear but actually offers a purely physical experience by perfectly reproducing the Low Frequency Effect recorded in some movies.

Mimesis 15: Mimesis 15 a latest acoustic processor by Goldmund is a class of its own. It allows each speaker drivers to be separately adjusted in frequency response, phase response, and time response. The processing functionalities allow reproduction of exceptional surround image in multichannel configuration.

Eidos 20 BDU: The Eidos 20 BDU is a universal Blu-ray player by Goldmund. It supports CD, DVD, Blu-ray and also comes with 3D playback possibilities. The player provides extreme quality and supports Goldmund's multi-channel technology. It has the patented Goldmund technology which makes it the most advanced Blu-ray player in the world.
