#### CJR<sup>™</sup> Graphite

Graphite for blast furnace linings, hearth, stack, cooling course, bosh, and side wall blocks. Features excellent thermal conductivity, high density, good strength, and excellent machinability.

#### CBY<sup>™</sup> Graphite

Low ash and low iron graphite for blast furnace linings, hearth, stack, cooling course, bosh, and side wall blocks. Features excellent thermal conductivity, high density, high strength, and excellent machinability.

### CS<sup>™</sup> Graphite

Low ash and low iron graphite for blast furnace linings, hearth, stack, bosh, tuyere, tapholes and side wall blocks. Features excellent thermal conductivity, high density, high strength, and excellent machinability. Through additional processing steps, CS<sup>™</sup> Graphite has higher density, strength, and thermal conductivity than CBY<sup>™</sup> Graphite.

#### CSX<sup>™</sup> Graphite

Low ash and low iron graphite for blast furnace linings, hearth, stack, cooling course, bosh, and side wall blocks. Features excellent thermal conductivity, high density, high strength, and excellent machinability. As a result of additional process steps, CSX<sup>™</sup> Graphite has higher density, strength, and thermal conductivity than CS<sup>™</sup> Graphite.

Properties listed are typical and cannot be used as accept/reject specifications.
