

Transponder cards

Technologies:

125 kHz:
Hitag-1
Hitag-2
EM 4102
EM 4150

13,56 MHz:
Mifare
Legic
I-Code

Construction / application:

Our transponder cards are used chiefly in access control systems, and as annual passes, season passes, etc.

The cards are laminated in white PVC, and the customer may choose between a gloss or matt finish.

We provide many options for personalisation, from customer-specific printing to laser inscription to personalisation with a photo image. Depending on quantity and requirements, printing is by pad printing, UV printing or digital printing applied under laminate.

Transponder:

The cards are available with various transponders (see Technologies).

Special combinations: We combine most 125 kHz transponders with 13.56 MHz systems. Double transponders can be supplied in different variations.
