

## Solid coils

Some of the solid-body coils are wound on standard coil bodies, but we also manufacture to meet customer specifications.

In fact, 80% of our coils are wound on customer-specific coil bodies (for example: the world's smallest solenoid valve, with a diameter of only 7 mm).

Basic data for the coils:

Wire gauge	0,015 mm to 0,40 mm
Winding type	similar, bifilar, trifilar

If desired, we can also manufacture coils with HF braid.

Our own specially developed software is used to develop and design to customer-specific requirements.
