

DCF 77 antennas

High-grade industrial modules receive data from the PTB (Physikalische Technische Bundesanstalt = German Federal Institute for Physical Technology) in Mainflingen. The antennas are manufactured from high quality ferrite cores and capacitors. Using the latest measurement technology, we can manufacture the antennas to very tight tolerances.

The key data for the coils is:

Length	30 mm to 160 mm
Diameter	6 mm to 10 mm

Special antennas for special frequencies and special applications can be supplied on request.
