

## FR-A7N-WiE Multiprotocol Wireless Ethernet Interface

### 700-Series Drive Wireless Ethernet Communications

The FR-A7N-WiE is a user-configurable multiprotocol wireless Ethernet (802.11b) communications interface card for the Mitsubishi 700-series family of adjustable speed drives. The FR-A7N-WiE plugs directly onto the drive's control board, and provides connectivity to the most popular Ethernet-based automation networks. Once installed, the FR-A7N-WiE provides native wireless Ethernet/internet access to all internal drive configuration, command and monitoring parameters. All interface card configuration is performed using a standard web browser, and all supported protocols can be active simultaneously.

Supported protocols currently include:

- BACnet/IP
- Modbus/TCP
- Mitsubishi MELSEC
- EtherNet/IP (for connectivity to Allen-Bradley -Logix and equivalent platforms)
- Allen Bradley CSP (for connectivity to Allen-Bradley PLC-5/E and SLC-5/05 -class PLCs)

The FR-A7N-WiE presents a standard 802.11b wireless Ethernet interface operating in the 2.4GHz band with data rates up to 11Mbps. A detachable 2.4GHz omni-directional fully articulating dipole antenna with RP-SMA connector is included. The interface also incorporates a variety of leading-edge automation and IT technologies, such as:

- Autonomous alarm evaluation with email notification
- Real-time web browser-based data interaction via an Adobe® Flash Player plug-in
- XML-based configuration file access
- A configurable network timeout action can be programmed that allows parameters to have their own unique "fail-safe" conditions in the event of a network interruption
- Configuration file transfer and firmware upgrade capability via FTP
- A dashboard GUI with multiple gauge windows, each of which can be configured to display drive data in a variety of meter, graph and gauge formats
- EtherNet/IP access to drive data via explicit messaging, user-defined I/O assembly instances, and the ODVA AC/DC drive profile
- Support for a variety of data encryption options, such as WEP, WPA and WPA2
- Availability of a variety of antenna connectivity options

For more information about this and other AC drive communication options, contact your local Mitsubishi Electric distributor, or visit us online at:
