

ABOUT IPEXTREME

For nearly a decade, IPextreme has been pushing the extremes of the semiconductor industry with continuous innovation in both intellectual property (IP) business and technical practices, changing the way the world thinks about semiconductor IP. Design reuse is not only our business—it's our passion.

We concentrate our efforts into three complementary focus areas:

IP Licensing

Working hard as a trusted partner to the largest semiconductor companies in the world, IPextreme has changed the way the industry thinks about semiconductor IP licensing. Using our proprietary process, the "IPextreme Machine" extracts high-value, silicon-proven IP in production at our semiconductor partner companies and then licenses it to other companies around the world. By doing so, we enable our partners to maximize the value of their captive IP assets and achieve strategic objectives. In turn, we provide our customers with a broad selection of low-risk, high-value IP with world-class technical support.

IP Management

We developed our proprietary **Xena™** technology as a complete, scalable business and technical platform for managing nearly every aspect of semiconductor IP within a corporation. For semiconductor companies, Xena offers a host of features for managing and tracking internal and external IP with supply management features for insuring contractual compliance. For IP companies, Xena offers a complete shrink-wrapped platform for running an IP company, including integrated release and distribution capabilities, as well as customer support. Just add IP, and you have a Fortune 500 class infrastructure for your company, no matter its size.

IP Industry Leadership

We believe that a healthy semiconductor industry is best served by an IP ecosystem comprised of many companies, large and small. To facilitate that, we have created **Constellations™**, a collective of independent, like-minded IP companies and industry partners that collaborate at both the marketing and engineering levels for mutual benefit—and, more importantly, for the benefit of our customers.

Enrollment in Constellations is currently open. Please contact us to learn more about how membership can benefit your company. You may also visit the Constellations Semiconductor IP Center to peruse the portfolio of IP solutions from IPextreme and our members at <https://constellations.xena-cloud.com>.

MEET WARREN SAVAGE

Warren Savage, President and CEO of IPextreme, Inc., is perhaps one of the most recognizable figures in the semiconductor industry. He has spent his entire career in Silicon Valley working with leading companies, including Fairchild Semiconductor, Tandem Computers, and Synopsys, where he focused on the problem of building a global, scalable semiconductor IP business. In 2004, Warren founded IPextreme with the mission of unlocking and monetizing captive intellectual property held within semiconductor companies and making it available to customers all over the world. Warren holds a BS in Computer Engineering from Santa Clara University and an MBA from Pepperdine University.
