

Kern Lockers Automated parcel lockers

Kern Lockers offers the market a full range of automated parcel lockers, with a modular design to suit different requirements.

Kern Lockers CT (city terminal) can be installed in both outdoor and indoor spaces, in particular with high volumes of people traffic, such as train stations for example. Kern Lockers HT (home terminal) are suited also to private properties, and Kern Cool Lockers are created for delivery of fresh and frozen food products.

Kern Lockers are suitable for postal delivery, courier, and service companies. Whether parcels, goods, or replacement parts – Kern Lockers ensure that your consignments arrive at the right place, at the right time.

The Kern Lockers logistics solution reduces costs and increases delivery efficiency from the first to the last mile. The latest generation of Kern Lockers provides the utmost flexibility in hardware and software, and integrates everything required for safe and easy operation of an automated logistics solution: modularity, safety, and lasting value in all aspects.

One software - multiple solutions

Kern Lockers Client manages the parcel delivery and collection processes. Kern Lockers Server assigns each parcel to a locker, and provides data analysis as well as issue tracking. Kern Lockers Integration Services enable external IT systems to interact with the Kern Lockers Suite. Kern Lockers Enterprise manages all the data collected on the platform, thus providing an appropriate management tool.

Features

- Overall concept. Kern Lockers Suite manages all business processes. From e-commerce integration, to delivery to the customer.
- Flexible. Kern Lockers Suite develops software processes according to customer requirements.
- Integration. Kern Lockers Suite offers the necessary interfaces to external IT services, such as for example postal and logistics operators, as well as e-commerce systems.

Our Services

- Personal advisory service on-site
- System integration
- Requirement analysis
- Work out an ideal solution
- On-site training of your employees
- Comprehensive support during operational phase

- Security. The Kern Lockers product range uses a patented safety system with monitoring sensors to prevent unwanted parcels.
- Monitoring. Kern Lockers Suite records operational and business data. Access via Kern Locker Server.
- Support. Kern supports the customer throughout all project phases, as well as in maintenance and optimisation.

Features modules

- Safety detection sensors in each box to ensure correct execution of deliveries and collections. Protection against playing children accidentally locking themselves in.
- Electronic door opening, electromechanical locks with remote activation.
- Base, structure, and doors manufactured from cold rolled steel. Galvanised structure. Doors reinforced internally, for greater rigidity.
- Anti-vandalism surface treatment.
- Available in customer colours, can be personalised with vinyl labelling.
