FOR IMMEDIATE RELEASE

Maretron Introduces Third Generation High Performance Black Box Vessel Monitoring and Control at Lowest Price Ever

PHOENIX, June 1st, 2016 - Today Maretron announces the release of its third generation black box vessel monitoring and control at a price 33% below the previous generation black box. In addition to a new lower price and compared to previous generations, the MBB300C offers higher performance, dissipates less power, is smaller and lighter, and includes an HDMI and VGA video output. Kip Wasilewski, Maretron's Director of Sales, said, "Maretron continues to improve its product line and with the addition of the MBB300C, we now offer one of the highest performance, lowest cost black box vessel monitoring and control system in the marine industry."

The MBB300C is a dedicated processing unit that includes Maretron's N2KView® vessel monitoring and control software. Unlike a PC that allows any software to be loaded, the MBB300C runs only N2KView® software making it extremely stable and dedicated to monitoring and controlling y the vessel. The MBB300C is ruggedized for marine use and includes a solid state disk drive to withstand the pounding associated with waves. And since the MBB300C dissipates less than 10 watts, there is no need for internal cooling fans that are noisy and wear out causing electronics to overheat and fail. To learn more about Maretron's MBB300C, please visit the following web page.
