

Features

- 1 Hz to 1 MHz ± 5 ppm all-inclusive frequency stability
- Factory programmable output frequency
- World's smallest TCXO Footprint: 1.2 mm²
 - 1.5 x 0.8 mm CSP
 - No external bypass cap required
- Improved stability reduces system power with fewer network timekeeping updates
- Ultra-low power: 8 μ A (100 kHz)
- Supply voltage: 1.8V $\pm 10\%$
- Operating temperature ranges: -20°C to +70°C, -40°C to +85°C
- Pb-free, RoHS and REACH compliant

Applications

- Health and wellness monitors
- Smart pens
- ULP input devices
- Proprietary wireless
- Sensor interface

Electrical Characteristics

Conditions: Min/Max limits are over temperature, Vdd = 1.8V $\pm 10\%$, unless otherwise stated. Typicals are at 25°C and Vdd = 1.8V.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Condition
Frequency and Stability						
Output Frequency	F _{out}	1		1M	Hz	
Total Frequency Stability ^[1]	F _{stab}	-5		5	ppm	All inclusive, Stability code: E
		-20		20	ppm	All inclusive, Stability code: 1
Allan Deviation	AD		1e-8	4e-8		1 second averaging time
First Year Frequency Aging	F _{aging}		± 1		ppm	T _A = 25°C, Vdd = 1.8V
Jitter Performance						
Integrated Phase Jitter	IPJ		1.8	2.5	ns _{RMS}	F _{OUT} > 1 kHz. Integration bandwidth = 100 Hz to F _{OUT} / 2. Inclusive of 50 mV peak-to-peak sinusoidal noise on Vdd. Noise frequency 100 Hz to 20 MHz.
Period Jitter	PJ		2.5	4	ns _{RMS}	Cycles = 10,000, f = 100kHz. Per JEDEC standard 65B
Peak-to-Peak Period Jitter	PJ _{p-p}		20	35	ns _{p-p}	
Supply Voltage and Current Consumption						
Operating Supply Voltage	Vdd	1.62	1.8	1.98	V	
Supply Current	I _{dd}		2		μ A	F _{OUT} = 1 Hz
			4.5			F _{OUT} = 33 kHz
			8			F _{OUT} = 100 kHz
			20			F _{OUT} = 1 MHz
Start-up Time at Power-up	t _{start}			300	ms	Measured when supply reaches 90% of final Vdd to the first output pulse.
Operating Temperature Range						
Operating Temperature Range	Op_Temp	-20		70	°C	"C" ordering code
		-40		85	°C	"I" ordering code
LVC MOS Output						
Output Rise/Fall Time	t _r , t _f		9	20	ns	10-90% (Vdd), 15 pF Load.
Output Clock Duty Cycle	DC	45		55	%	
Output Voltage High	VOH	90%			Vdd	I _{OH} = -1 μ A
Output Voltage Low	VOL			10%	Vdd	I _{OL} = 1 μ A

Note:

1. Relative to 32.768 kHz, includes initial tolerance, over temp stability, 3x reflow, Vdd range, board-level underfill, and 20% load variation. Tested with Agilent 53132A frequency counter. Measured with 100 ms gate time for accurate frequency measurement.

Pin Configuration

CSP Pin	Symbol	I/O	Functionality
1	GND	Internal Test	Connect to ground.
2	CLK Out	OUT	Oscillator clock output.
3	Vdd	Power Supply	1.8V ±10% power supply. Under normal operating conditions, Vdd does not require external bypass/decoupling capacitor(s). SiT1576 includes on-chip filtering capacitors.
4	GND	Power Supply Ground	Connect to ground.

CSP Package (Top View)

Absolute Maximum Ratings

Attempted operation outside the absolute maximum ratings may cause permanent damage to the part. Actual performance of the IC is only guaranteed within the operational specifications, not at absolute maximum ratings.

Parameters	Test Conditions	Value	Unit
Continuous Power Supply Voltage Range (Vdd)		-0.5 to 4.0	V
Continuous Maximum Operating Temperature Range		105	°C
Short Duration Maximum Operating Temperature Range	≤ 30 minutes	125	°C
Human Body Model (HBM) ESD Protection	JESD22-A114	2000	V
Charge-Device Model (CDM) ESD Protection	JESD22-C101	750	V
Machine Model (MM) ESD Protection	JESD22-A115	300	V
Latch-up Tolerance	JESD78 Compliant		
Mechanical Shock Resistance	Mil 883, Method 2002	20,000	g
Mechanical Vibration Resistance	Mil 883, Method 2007	70	g
1508 CSP Junction Temperature		150	°C
Storage Temperature		-65 to 150	°C

System Block Diagram

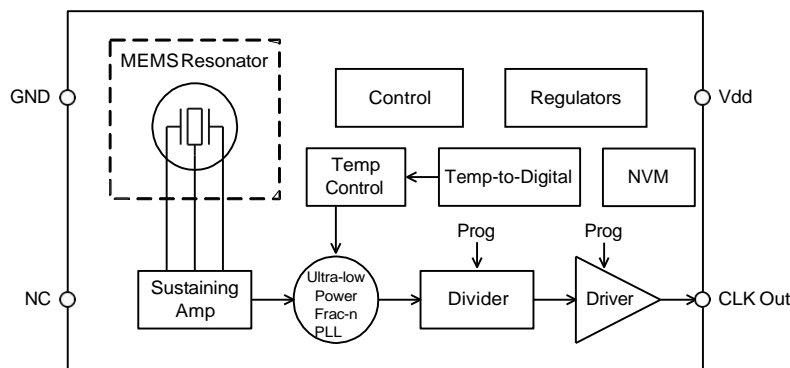

Figure 1. SiT1576 Block Diagram

Description

SiT1576 is an ultra-small and ultra-low power Factory programmable TCXO with an output frequency range between 1 Hz to 1 MHz. SiTime's silicon MEMS technology enables the first 1 Hz - 1 MHz TCXO in the world's smallest footprint and chip-scale packaging (CSP). Typical supply current is 4.5 μ A (33 kHz) under no load condition.

SiTime's MEMS oscillator consists of a MEMS resonator and a programmable analog circuit. SiT1576 MEMS resonator is built with SiTime's unique MEMS First™ process. A key manufacturing step is EpiSeal™ during which the MEMS resonator is annealed with temperatures over 1000°C. EpiSeal creates an extremely strong, clean, vacuum chamber that encapsulates the MEMS resonator and ensures the best performance and reliability. During EpiSeal, a poly silicon cap is grown on top of the resonator cavity, which eliminates the need for additional cap wafers or other exotic packaging. As a result, SiTime's MEMS resonator die can be used like any other semiconductor die. One unique result of SiTime's MEMS First and EpiSeal manufacturing processes is the capability to integrate SiTime's MEMS die with a SOC, ASIC, microprocessor or analog die within a package to eliminate external timing components and provide a highly integrated, smaller, cheaper solution to the customer.

TCXO Frequency Stability

SiT1576 is factory calibrated (trimmed) over multiple temperature points to guarantee extremely tight stability over temperature. Unlike quartz crystals that have a classic tuning fork parabola temperature curve with a 25°C turnover point with a 0.04 ppm/°C² temperature coefficient, the SiT1576 temperature coefficient is calibrated and corrected over temperature with an active temperature correction circuit. The result is a 32 kHz TCXO with extremely tight frequency variation over the -40°C to +85°C temperature range.

When measuring the output frequency of SiT1576 with a frequency counter, it is important to make sure the counter's gate time is >100 ms. Shorter gate times may lead to inaccurate measurements.

Dynamic Temperature Frequency Response

Dynamic Temperature Frequency Response is the rate of frequency change during temperature ramps. This is an important performance metric when the oscillator is mounted near a high power component (e.g. SoC or power management) that may rapidly change the temperature of surrounding components.

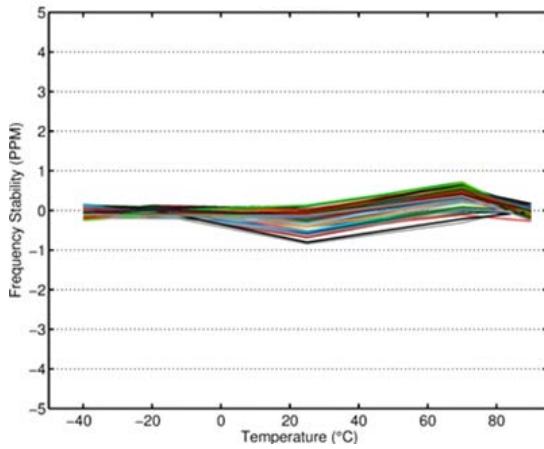

For moderate temperature ramp rates (< 2°C/sec), the dynamic response is primarily determined by the steady-state frequency vs. temperature of the device. The best dynamic response is obtained from parts which have been trimmed to be flat in frequency over temperature.

For high temperature ramp rates (>5°C/sec), the latency in the temperature compensation loop contributes a larger frequency error, which is dependent on the temperature compensation update rate. This part achieves excellent performance at 3Hz update rate. This device family supports faster update rates for further reducing dynamic frequency error at the expense of slightly increased current consumption.

Typical Operating Curves

(T_A = 25°C, V_{DD} = 1.8V, unless otherwise stated)

Frequency Stability over Temperature (Post Reflow)

Start-up and Steady-State Current Profile

Power Supply Noise Rejection (PSNR)

Dynamic Frequency Response for Moderate Temperature Ramps

Frequency accuracy under a moderate temperature ramp up to 2°C/sec is limited by the TCXO's trimmed accuracy of the frequency stability over-temperature.

Note:

1. Measured relative to 32.768 kHz.

Dynamic Frequency Response for Fast Temperature Ramps

For temperature ramps >5°C/sec, the frequency accuracy is limited by the update rate of the temperature compensation path (see the 5°C/sec and 10°C/sec plots).

Note:

1. Referenced to 32.768 kHz.

Dimensions and Patterns

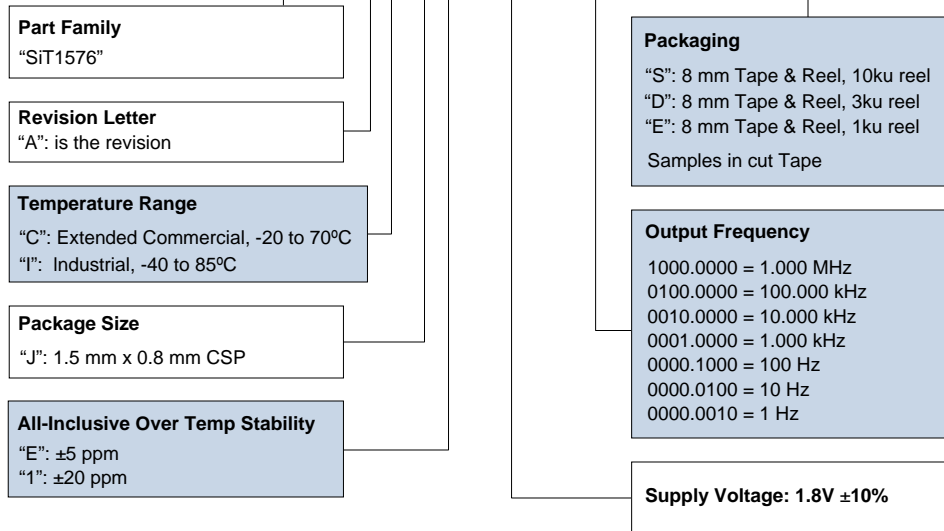

Package Size – Dimensions (Unit: mm)	Recommended Land Pattern (Unit: mm)
<p>1.55 x 0.85 mm CSP</p>	<p> $\phi 0.25$ (4x) NSMD pads </p> <p> $\phi 0.35$ (4x) Soldermask openings </p> <p>(soldermask openings shown with heavy dashed line)</p> <p>Recommended 4-mil (0.1mm) stencil thickness</p>

Manufacturing Guidelines

- 1) No Ultrasonic or Megasonic cleaning: Do not subject SiT1576 to an ultrasonic or megasonic cleaning environment. Permanent damage or long term reliability issues may occur.
- 2) Applying board-level underfill and overmold is acceptable and will not impact the reliability of the device.
- 3) Reflow profile, per JESD22-A113D.
- 4) For additional manufacturing guidelines and marking/tape-reel instructions, click on the following link: http://www.sitime.com/component/docman/doc_download/243-manufacturing-notes-for-sitime-oscillators
