DataChart 1250 Overview

The DC1250 is a feature rich digital recording system offering 2 universally configurable isolated inputs for measuring DC voltage, DC current, thermocouples, RTD's as well as frequency and pulse inputs. 4 internal alarm setpoints, 2 alarm relay outputs and 1 digital control input are all standard. Combining small package size with extreme flexibility make the DataChart 1250 a powerful, yet economical, digital data recording system.

A maximum sample storage rate of 100 samples per second can be set for both channels allowing for capture of short duration process signals anomalies. CompactFlash cards up to 2 Gigabyte size can be used allowing many data points to be stored over long periods of time.

With intuitive operation, flexible input configuration and large memory capability, the DataChart 1250 is a powerful, compact digital recorder.

DataChart 1250 Features

Communicate

A front accessible USB port is available. It provides access to data stored on the CompactFlash™ card. Simply connect your laptop to the DC1250 using the supplied USB cable to extract your data or collect real-time information.

Bright and Clear Display

The DC1250 has a highly reflective twisted nematic LCD display with a bright white LED backlight. The graphic user interface can be configured to display real time data in digital or trend format. Configuring the 1250 is an intuitive process which uses an easy to follow menu system.

Versatile Power

The DC1250 is supplied with a universal wall transformer power supply (North American plug) that can operate from 100 to 240Vac 50/60Hz. An optional transformer with an interchangeable plug set is available.
An isolated input power of 12-24Vdc is also available for use with instrument power supplies or external batteries.

The DC1250's real time clock and internal RAM have a battery back-up to preserve data in the event of a power loss.

If losing data during a power outage is a concern, the user can add the rechargeable battery pack option. With the battery pack option installed, the DC1250 automatically keeps the rechargeable NiMH batteries charged to capacity. In the event of a power loss, the DC1250 automatically switches over to internal battery power. All functions continue to operate as normal for up to 8 hours! This option is also great for using the DC1250 in areas where no AC or DC power is available.

Measure RPM

The DC1250 can be used in conjunction with many of Monarch's speed measurement sensors. Power for sensors is provided from the DC1250 rear terminals. Measure, display and record RPM ranges from 5 - 600,000. Choose the sensor best suited for your application or take your existing signal (0 - 5V TTL) directly into the 1250.
