Company

NMDG develops and commercializes products and services that "characterise and analyse beyond S-parameters" the behaviour of active high-frequency (HF) electrical components under realistic test conditions.

NMDG is working to provide the best solutions for active component characterisation to a wide range of customers in high – frequency electronics and communications. This enables high-frequency design- and test-engineers to go faster to market with better performing products.

A close and personalized interaction with customers is of paramount importance to NMDG.

Job Description

NMDG is offering an interesting and varying job as .NET developer in a motivated team. Together with the team, you will contribute actively to the evolution of the software measurement platform "ICE". You will play a leading role in the development of the "operating system" of ICE and you will be responsible for the realisation of user-friendly graphical interfaces. Together with the team you will be actively involved in the definition of requirements and use models for new projects.

As software release manager you will be responsible for the complete software release cycle (automatic builds, installers, software management tools,...) and for the final releases of the software product.

Because the software is focused on measurements, you will be occasionally involved with hands-on measurements in the lab. There is also the opportunity to drive the IT infrastructure.

Your profile

- Masters or bachelors degree in ICT / Informatics
- Experienced with C# .NET development
- Fluently in Dutch and/or English
- You can work independently and in a structured way
- You think analytically and can work towards solutions
- You have some basic background in measurement techniques
- You are a team player

Required expertise

- C# .Net (2.0 or higher)
- WinForms, MVC
- Visual Studio (2005 or higher)
- XML, Object Oriented Programming

Experience in the following topics is an advantage

- GUI design
- .NET remoting
- Revision control (Subversion)
- Licensing (IntelliLock)

- Developing installers (InstallAware)
- Release management (testing, automated builds, defect / feature tracking, …)
- Windows Help documentation (HelpStudio)
- VISA I/O layer, IVI drivers
- IT / hardware / servers / networking

NMDG offers

Besides a very flexible and well varying function in an international work environment, NMDG offers a unique occasion to to deploy and further develop your skillset in an advanced market place. You will be part of a high – technological team, where you will play an active role in the realization of projects with international players.
