## TO BE DISCONTINUED 12/2016. FOR REPLACEMENT MODEL, CLICK HERE: NTM-X

# LOOP or AC SIGNAL <u>P</u>OWERED EXPLOSION PROOF METER WITH SERIAL I/O, I.R.D.A. & > 30 INPUT SIGNALS

# MODEL LPX

## **FEATURES:**

- Loop, AC Signal or External Power
- 4 1/2 LED Digits
- Intrinsically Safe by Design
- I.R.D.A. Programmable
- RS232, 485 or USB Serial
- Remote Display Capability
- 5-48VDC or 100-240VAC Power
- Custom Input for any Transducer
- Zero, Span, D.P., Hold, Peak, and more via I.R. Serial or Hardware
- OTEK's Exclusive Lifetime Warranty
- Adjustable Display Position

# SPECIFICATIONS @ 25°C

## (Industrial Grade)

**Loop Powered Models:** •5.5V With LED Display

- •Max. Input Current: 36mA, Max. Volts: 30V
- •Min. Input Current: 3.6mA
- •Accuracy & Linearity:  $\pm 0.01\%$  of F.S.  $\pm 1$  Digit
- •Span Adjustment:  $\pm 3000$  Counts of F.S. (10,000)
- •Zero Adjustment:  $\pm 3000$  Counts of Zero (00000)
- •Standard Calibration: 4-20 = 0-1.0000, Others On Request
- •Serial I/O: RS232E (Parasitic)

## **DESCRIPTION**

The World's Largest Loop Powered Instrument Manufacturer since 1974 brings you its Model **LPX** which is a variation of the World's First Loop Powered Meter with Serial I/O, the **LPM** and **LPE**.

The <u>LPX</u> has several added features such as Industry Standard <u>I.R.D.A.</u> communications (I/O) that eliminates the need to stop the hazardous process to re-scale or calibrate the meter.

Serial I/O via RS232, 485 or USB to give you on-site data via wires. Provisions for Signal Conditioners to convert T.C., **<u>RTD</u>**, S-G, etc. at your request.

The compact **E.P.** housing is the smallest in the market, yet it is fully Class I, Div. 1 & 2 Certified with 3 NPT ports and the display can be rotated 90 degrees inside the case!

# APPLICATIONS:

- Harsh & Hazardous Locations
- Hard to Reach Areas
- High Reliability Applications

If You Don't See It Ask For It!

## **NEW:** AC SIGNAL POWERED:

Power: From P.T. or CT, 100mW
Accuracy: ±0.5% of F. S. for A, V, W or Hz
Isolation: None (use P.T. and/or CT).

## **Powered Models:**

- •Loop Burden:1.0V@20mA; 50 Ohms
- •Current Requirement @ 5V: 4mA
- (w/o microcontroller) = 24mA
- •Current Requirement @ 5V: 10mA
- (with microcontroller) = 30mA
- •Power Input: USB & 5-48VDC or 100-240 VAC

## **OTHER SPECIFICATIONS**

Display: 4 1/2 LED Digits 0.4", 6 O'Clock Viewing Angle
Input Type: Differential & Single Ended. 10M For VDC
Common Mode R.R.: 100dB @ 50/60 Hz
Conversion Rate: 2.5/Second
Step Response: 0.8 Sec. (0-90% of F.S)
Common Mode Voltage: ±2VDC

- •Op./Storage Temp: -10 + 60/ -20 + 70°C
- •MTBF: >100,000 Hours
- •Serial I/O: RS232/485/USB, 300-19.2Kb (8N1)
- •RS232E Power: Parasitic From RS232, when loop powered
- •RH: 5-95% RH Non-Condensing
- •Temperature Coefficient: 50PPM/°C
- •Explosion Proof FM & CSA: Class I, Div. 1 GPS. B-G
- EX & 1 ECex: IM2, Exd1
- •I.R.D.A.: 9600 Baud

<b>THE SIGNAL CONDITIONERS:</b> <b>Option 00: 4-20mA Powered:</b> First introduced in 1975, the current flows through a Zener and "Shunt" resistor. The Zener clamps the volt- age to about 3.5 Volts and the voltage across the Shunt is measured and displayed. Because an LED acts as a Zener, instead of a Zener the LEDs of the backlite are used to power the meter. If the "burden" (3.5 - 4.5V) is too high for your application, use the externally powered Option 01.	<b>Option 23: 5 Amps AC:</b> Specifically for current transformers ( <u>C.T.</u> ) this option requires an externally mounted (supplied) 0.05 Ohm, 0.1% 3 Watt resistor. You can mount the "Shunt" at your <u>C.T.</u> or next to the <u>LPX</u> but make sure the connections are "Per- fect" to electrical codes. The C.T. might have <u>"Lethal" High Voltage</u> without a "Shunt" (Open) and the <u>LPX</u> will "Smoke". See OTEK's New <u>ACS &amp; CTT</u> models for <u>C.T.</u> pow- ered instruments (Pat. #7,626,378).	<b>Option 27: RTD (PT1000):</b> Same as PT100 except it is 1000 Ohms at $0^{\circ}$ C instead of 100 Ohms @ $0^{\circ}$ C. The same technique is used. For copper <b>RTD</b> (10 Ohm), contact <b>OTEK</b> . <b>Option 28: Thermocouple (Type</b> <b>J):</b> This <b>TC</b> has a range of -210 to + 760°C (-350 + 1390°F). Its color is white (+) and Red (-), cold junction (CJ) is inside the <b>LPX</b> at the connec- tor base. Make sure the connections from the <b>LPX</b> 6" wires and your <b>TC</b> are as along to the <b>LPX</b> 'n entropop on
<b>Option 01: 4-20mA Externally Pow-</b> <b>ered:</b> It only drops 1V @ 20mA (10 Ohms) but the " <b>LPX</b> " needs 5VDC @ 20mA to operate (including the back- light or LEDs).	<b>Option 24:</b> Strain-Gage (<1000 Ohm Type): Here we use high ac- curacy and stability constant current (~1mA) source, and a differential amplifier to convert the 2 or 3mV/V (typical) sensitivity of your "Load- cull". Space for your Strain Cores con	are as close to the <u>LPX s</u> entrance as possible to avoid errors and calibrate after connecting. If you short out the <u>LPX's</u> TC wires together, the <u>LPX</u> will read the ambient temperature due to its built-in C.J.C.
<b>Option 02: 4-30VDC Signal Pow-</b> <b>ered:</b> Another <b>OTEK</b> innovation. The voltage signal powers an <b>LDO</b> to protect the <b>LPX</b> and a divider network	sitivity and full scale and the <u>SPM's</u> display at Zero and Full Scale Please! Accuracy: ±0.05% of F.S.	<b>Option 30:</b> TC (Type K): This is yellow (+) and red (-) and has a range of $-270 + 1370^{\circ}$ C (-440 + 2500°F). Use same notes as Option 28.
is used to measure and display the signal. If the relatively low impedance (500 Ohms) and current (3-20mA) re- quired by this Powerless <sup>™</sup> technique is unacceptable, use Options 04-08	Option 25: Strain-Gage (≥1K < 4K Ohm): These are typically "Monolithic" <u>S-G</u> that require con- stant voltage (preferably) excitation. We use 4 096V for high stability and	<b>Option 31:</b> TC (Type T): This blue (+) and red (-) TC wire has the range of $-270^{\circ} + 400^{\circ}$ C (-440 + 750°F). Use same notes as Option 28.
Options 04-08: VDC Externally Powered: Input impedance is 1Mega Ohms. (See power input Digit 4).	accuracy. <b>Specify</b> your S-G imped- ance and sensitivity and the <b>SPM's</b> display at Zero and Full Scale.	<b>Options 32-33: Frequency Input:</b> We use an <b>F-V</b> to accept frequencies from 40 - 20KHz and amplitudes from 1-400V peak or dry contact or open collector transistor (O.C.T.) for
<b>Option 09: Custom:</b> Use this option to describe any custom input, scale or modification to the LPX and contact us for feasibility and cost.	Accuracy: ±0.1% of F.S. Note on S-G: Some S-G offer +/- 1VDC or 4-20mA condition output. Use Option 9 and specify.	50 to 440 Hz power line frequency measurement. Use Option #"33" or see our <u>ACS</u> Powerless <sup>TM</sup> Series, or Option 42 for signal powered.
<b>Options 10-13: 20mA - 200mADC:</b> Since the <b>LPX</b> is 200mV full scale (20,000 Counts) the "Shunt" resistors used are 1K, 100, 10 or 1 Ohm. Don't forget that maximum display is 19,999 not 20,000!.	<b>Option 26: RTD</b> ( <b>PT100</b> ): We excite your 2, 3 or 4 wire RTD with 200uA to avoid the "self heating" effect. The range of the <b>LPX</b> is the same as your <b>RTD</b> typically -200°C to +800°C (-328 + 1562°F). You can place the decimal point at will (typically	<b>Option 34:</b> % <b>RH:</b> This conditioner is designed to interface to a typical (capacitance type) 2-3pF/% of <b>RH</b> made by several manufacturers. Use Option "09" and contact <b>OTEK</b> to specify your sensor's specifications.
<b>Options 14-22: V &amp; mA RMs:</b> Here we use a <b>True RMS-DC</b> Converter for accurate ( $\pm$ 0.05%) measurement of sine waves up to 10KHz ( $\pm$ 0.5%, 10-20KHz) and SCR's fired to $\pm$ 2%. Input impedances vs. range are the same as for VDC ranges.	-200.0 to 800.0 (-328.0 to 1562.0)). The <b>PT100</b> has a temperature coefficient of 0.00385 Ohms/Ohm/ <sup>0</sup> C. For legacy 0.00392 TC (known as ANSI 392) contact <b>OTEK</b> and use Option "09". -2-	<b>Option 35: pH (Acidity):</b> We use a FET input (1015) amplifier and cali- brate the <b>LPX</b> for 0-14.00 pH using the Industry's standard + 413 mV = +7pH coefficient. <b>Accuracy:</b> +0.05% of F.S.

Option 36: ORP(Oxygen Reduction Potential):Our FET amplifier (109) accepts the industry standard2000mVF.S. of the probe and the LPX displays it in %(0-100.00%)Option 37: Hi Speed Peak & Hold (P&H ):Now youcan capture fast transients greater than 50 microseconds(even faster soon) with resolution greater than 0.1%of F.S. and retention of greater than 10 years (Due toOTEK's new and patent-pending P&H Option).	Option 43: Signal Powered AC Watts: Warning! No Isolation! Here we combine the powerless VAC & AAC options to arrive at real power calculations through our CPU and DAC. The same warnings and precautions of Options 40 & 41 apply. Range: VAC: 50-150; AAC: 0.1 - 5A; Frequency: 45-440 Hz; Accuracy & Linearity: ±0.1% of F.S.; Conversion: True RMS. Contact OTEK for other functions.Note: For watts, use Fig. 40 & 41. Do NOT reverse con- pactore		
<b>Input:</b> V or mADC (Specify Range). Contact OTEK for V/mA RMS or Loop Powered).	<b>SERIAL I/O: (DIGIT 4):</b> All Serial I/O connectors are plug-in euro style and accept 26-20 ga. wire. Standard baud rate is 9600 but range is 300-19,200 all ASCII, 8N1 open protocol. The V2.0 USB (Option 6) allows powering of the LPX from the port.		
Accuracy: +/- 0.1% of F.S. +/- 1 Digit			
<b>Linearity &amp; Resolution:</b> +/- of F.S.			
<b>Response time:</b> >20KHz (<50us)	IRDA: As part of the Serial I/O, it complies with current standards.		
<b>Retention:</b> >10 years (with power on).	Note: USB drive free at www.otekcorp.com		
<b>Option 40: Signal Powered for VAC</b> : No power supply req'd! Just connect to your P.T.(non-isolation) and display value. Analog meter replacement, range: 40-150VAC, 45-440Hz. Burden 0.1W, Accy.& Lin. :+/-0.5% of F.S.	<b>POWER INPUT (DIGIT 5):</b> Here you have the most extensive selection of power inputs, including OTEK's exclusive Powerless <sup>™</sup> (Signal Powered for 4-20mA, VDC & AC, V, A, W & Hz) options.		
<b>Option 41: Signal Powered Amps AC:</b> No Power Supply Req'd! Just connect to your C.T. & P.T. range: VAC: 40-150; AAC; 0-5Amp; 50-400Hz; burden; 0.1W Accy. & Lin.; +/- 0.5% of F.S. <b>Note</b> : NO Isolation, use with P.T. & C.T. only. Must use shunt on C.T. 0.05% Ohm, 3W. <b>Warning</b> No isolation connect D.P. if req'd before Powering.	OUTPUTS (DIGIT 6): Option 1 provides non-isolated 24 VDC@30mA (5-24 VDC-DC), eliminating the need for additional/external power for your transmitter. Option 2 converts the input signal (after the signal conditioner) to a 4-20mA current loop signal with internal compliance and is capable of driving up to 1K Ohm loads.		
<u>More:</u> New Signal Conditioners will be added as per your requests and popularity, such as Ohms, Conductiv- ity, Shock, Vibration, Position etc. Contact <b>OTEK</b> .	<b>DISPLAY (DIGIT 7):</b> 0.4" high efficiency red (other displays available on request) LED.		
<b>Option 42: Hertz (Frequency) Signal Powered:</b> <b>Warning! No Isolation!</b> This option uses the same pow- er technique as Option 40 above and the same precau- tions and warnings apply. Here we use a "Zero Crossing" detector and a F-V converter to give you the <u>A.C.</u> line frequency display with 0.1 Hz resolution. Range: VAC: 50-150VAC/Frequency: 30-440Hz; Accuracy & Linear- ity: $\pm 0.05\%$ of F.S.			

## LPX MECHANICAL INFORMATION

NOTE: Do not remove cover in hazardous area, remove cover and select decimal point desired in safe area.

# LPX SERIES ORDERING INFORMATION 9-9-14

### **<u>NOTES</u>:** Please READ BEFORE building part number:

- 1. If digits 2 & 3 are options 00 or 02, then digit 4 must be option 0 or 1, and digits 5 and 6 must be 0.
- 2. If digits 2 & 3 are options 40, 41, 42 or 43, then digits 4, 5 & 6 must be option 0.
- 3. If digit 5 is option 6, then digit 4 must be option 3.
