

DataAlert!™

Cost Savings, Control and Visibility for Telecom Devices and Services

Manage data and avoid higher-than-expected bills for company-owned smartphones.

DataAlert! is a mobile app that tracks your 3G/4G national data, Wi-Fi, and international roaming usage in real-time and alerts you by e-mail/sms in case of usage beyond a pre-defined limit. It allows you to setup your data limit daily, weekly, and monthly, and to fix the volume in which the alerts should be activated.

This application has the ability to:

- Monitor, in real time, the data usage of company devices and carrier plans.
- Provides notifications to employees and Mobile/Telecom Managers when a threshold has been reached.
- Leveraging your MDM, DataAlert can disable data on a company device to eliminate overage.
- Personalize the alerts' data limits to inform you in real-time in case of usage beyond the pre-defined setup. This helps you to avoid Bill Shock and helps you take control of your usage.

The app is installed on every smartphone in the fleet and a console controls all the data usage by your fleet in real-time. Through the console you can:

- Identify phones actually in roaming and their data usage in real-time
- View usage history and anticipation of data charges in real-time
- Execute multiple actions directly possible on several phone lines
- Visualize all the phone lines in the fleet:
 - Mass modification of phone lines
 - Setup and schedule messages to be sent to fleet's phone lines
 - Management of roaming charges by zone and by carrier
 - Management of data limits
 - MDM integration

Business Benefits

- **Avoid bill shock on all phone lines.**
- **Get excess usage alerts in real-time.**
- **Get a global overview of your fleet's telecom expenses.**
- **Personalize data limit alerts and employee notifications.**
