### 4.2 Most important symptoms/effects, acute and delayed

Irritant contact dermatitis may result from prolonged contact with the product, the causative agents being residual surfactants, certain processing chemicals and inadequate post production processing. There are no evidence of any adverse effects from available information of sulfur, zinc oxide and titanium dioxide. However, presence of residual ZDEC, ZMBT and anti-oxidants on the product surface may cause delayed type IV hypersensitivity e.g. allergic contact dermatitis and chemical allergy. Reactions include itching, burning sensations, blistering, reddening and pain. In chronic cases, users may develop dry and thickened skin, cracks, peeling and crusting.

# **4.3** Indication of immediate medical attention and special treatment needed, if necessary If allergic reaction occurs, discontinue use immediately and consult a physician.

# **SECTION 5: Fire-fighting measures**

### 5.1 Suitable extinguishing media

Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

**5.2** Specific hazards arising from the chemical No fire or explosion hazards are associated with these products. They will melt at elevated temperatures.

### 5.3 Special protective actions for fire-fighters

Use standard procedure for combustion material fires, including approved self-contained breathing apparatus.
