

General Description

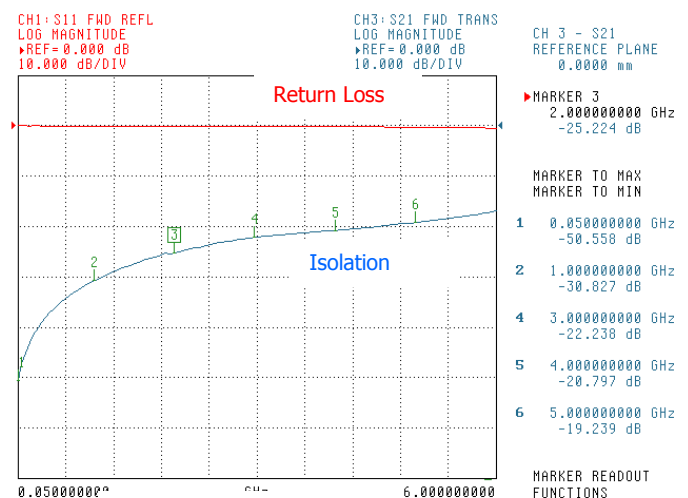

The evaluation test board has one RMSW100HP SPST RF switch connected to two SMA RF connectors, as well as a calibration line. The board requires an external supply to provide the gate actuation voltage.

Port In/Out

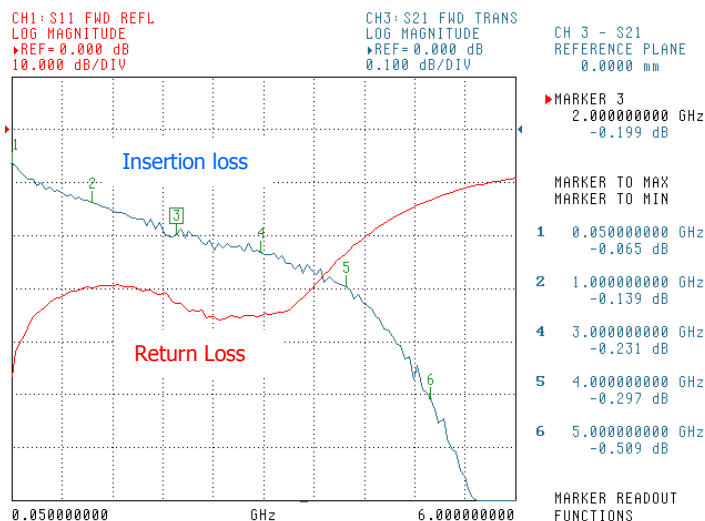

Calibration Port In/Out

Switch Insertion Loss
(Test Board minus Calibration Line Loss)

Switch Isolation

Test Board Insertion Loss

Gate-Gnd Voltage Signal Path State

+/- 90 V	ON
0 V	OFF

External DC ground return resistors are provided on the board.

This evaluation board operates at a reduced frequency range in comparison to the native device due to design and material limitations of the evaluation board.
