

PIPE TOOLS & VISES
SINCE 1896

cuts safely, squarely and
QUICKLY

LOW CLEARANCE ROTARY™ CUTTERS

- Safely cuts pipe in the ditch — no fumes or dangerous exposed blades.
- Only needs 5" (127 mm) clearance for up to 18" (462 mm) diameter pipe.
- The new **LCRC4** cuts 2"–4" (51–102 mm) pipe and needs just 4" (102 mm) clearance.
- Cuts steel, most stainless steel, ductile and cast iron pipe in close quarters.
- No need for compressor or hydraulics — use manual power.
- Save time with minimal digging for dirt removal. (Power saws require more digging.)
- Cuts fast — about seven minutes on 8" ductile iron pipe, after set-up.
- Extra long handle and innovative design make it simple to move from slot to slot, allowing fast, one-directional cuts.
