

Changing the Battery

When installing a new battery, please ensure that **no metal tweezers** or similar **metallic tools** are used. **Plastic tweezers** are required to be used; otherwise, the battery could be short-circuited and damaged.

Also, make sure that the battery contacts are not bent, which could cause the battery to short-circuit. Make sure the battery is **not** in the same container as the housing base and/or the screws provided, otherwise the battery can be short-circuited and damaged.

- Only use the recommended Renata battery type as stated in the instruction sheet.
- Make sure that the contact surfaces of the battery are clean.
- Make sure that the battery polarity (+ / -) is correct when replacing the battery.
- Remove a dead battery immediately from the watch. Keeping a dead battery in a watch can damage the movement.
